

Master of Science

Mathematics

SRI VIDYA MANDIR ARTS & SCIENCE COLLEGE

(Autonomous)

[An Autonomous College Affiliated to Periyar University, Salem, Tamil Nadu]

[Accredited by NAAC with 'A' Grade with CGPA of 3.27]

[Recognized 2(f) & 12(B) Status under UGC Act of 1956]

Katteri – 636 902, Uthangarai (Tk), Krishnagiri (Dt)

Tamil Nadu, India

DEGREE OF MASTER OF SCIENCE IN MATHEMATICS

CHOICE BASED CREDIT SYSTEM (CBCS)

REGULATIONS AND SYLLABUS FOR

M.Sc. MATHEMATICS PROGRAMME

(SEMESTER PATTERN)

(For Students Admitted in the College from the Academic Year 2023-2024 Onwards)

**REGULATIONS AND SYLLABUS FOR M.Sc. MATHEMATICS PROGRAMME****(For Students Admitted in the College from the Academic Year 2023-2024 Onwards)****1. Vision of the Department**

To create teaching and research excellence in mathematics to fulfil the mathematical needs of the society and nation.

2. Mission of the Department

To Provide high quality mathematical graduates who are relevant to industry and commerce, mathematical education and research in science and technology.

3. Definitions

(i) Programme: Programme means a course of study leading to the award of the degree in a discipline.

(ii) Course: Course refers to the subject offered under the Degree Programme.

4. Aims of the Programme

1. To have well-rounded introduction to the main branches of modern Mathematics that keeps an appropriate balance between Theoretical and Applied Mathematics.
2. To have training and knowledge necessary to appreciate and apply Modern Mathematics and to find rewarding careers in Mathematics related fields, or to pursue research in Mathematics.
3. To have an understanding of the tools required to be able to quantitatively analyze and understand the natural and social world.
4. To have the ability to solve problems, think analytically, and reason quantitatively.
5. To have the ability to access and communicate Mathematical information.
6. To have an appreciation of the concept of formal Mathematical proof and the ability to write simple proofs.
7. Enable students to prepare for different research/teaching qualification and
8. Competitive examinations, such as CSIR-NET, SET, TRB, TNPSC and UPSC.

5. Programme Outcomes (POs)

PO1	Identify and enhance mathematical and computational strategies in order to solve mathematical problems.
PO2	Construct logical arguments for solving abstract or applied mathematical problems.
PO3	Obtain accurate solutions for the community oriented problems via various mathematical models.
PO4	Know various specialised areas of advanced mathematics and its applications.
PO5	Present papers in seminars and conferences in order to defend their mathematical skills on various topics in the curriculum.
PO6	Work as professional mathematicians either in academia or elsewhere.
PO7	Inculcate knowledge of formulation and apply mathematical concepts which are suitable for real life applications.
PO8	Crack lectureship and fellowship exams affirmed by UGC like CSIR-NET and SET.

6. Programme Specific Outcomes (PSOs)

PSO1	Develop the mathematical skills and knowledge for their intrinsic beauty, for proficiency in analytical reasoning, utility in modeling and solving the real world problems by using the concepts of Algebra, Analysis, Dynamics, Differential Equations, Geometry, Topology, Operations Research, Fuzzy Sets & Fuzzy Logic, Fluid Dynamics and Matlab.
PSO2	Develop computational and logical thinking and the habit of making conclusions based on quantitative information.
PSO3	Work efficiently and constructively as a part of a team and do project Individually.
PSO4	Do projects related to emerging Social and Environmental issues.
PSO5	Join in various Universities and Institutions like IMSC, IISc, etc., in order to do summer research projects on Algebra, Analysis, Topology, Mechanics, Fluid Dynamics, Differential Equations, Number Theory, Matlab, Differential Geometry and Fuzzy sets.

7. Eligibility for Admission

A Candidate who has passed B.Sc. Maths or any other relevant Degree of Periyar University or any other University accepted by the Syndicate of the Periyar University as equivalent thereto, subject to such conditions as may be prescribed therefore are eligible for admission to Master of Science (M.Sc.) Degree Programme in Mathematics and shall be permitted to appear and qualify for the M.Sc. Degree Examination in Mathematics of this Autonomous College affiliated to Periyar University after a course of study of two academic years.

8. Duration of the Programme

The Programme for the Degree of Master of Science (M.Sc.) in Mathematics shall consist of two academic years divided into four semesters. Each Semester consists of 90 working days (450 hours).

9. Features of Choice Based Credit System

Under Choice Based Credit System (CBCS), a set of Courses consisting of Core Courses, Elective Courses, Skill Based Elective Courses and Extra Disciplinary Course are offered. Beside the Core Courses, which are totally related to the major subjects, the students have the advantage of studying supportive courses and non-major courses. This provides ample opportunity for the students to learn not only the major subjects but also inter disciplinary and application oriented subjects.

10. Syllabus

The syllabus of the M.Sc. Mathematics Degree Programme is divided into the following Courses

- (i) **Core Courses:** The Core Courses are related to the Programme concerned including practicals and project offered under the Programme.
- (ii) **Elective Courses:** There are Four Elective Courses offered under the Programme related to the major or non-major but are to be selected by the students.
- (iv) **Extra Disciplinary Course (EDC):** Chosen by the students from other disciplines /departments of the college.
- (v) **Extra Credit Courses:** In order to facilitate the students gaining extra credits, the Extra Credit Courses are offered. According to the guidelines of the UGC, the students are encouraged to avail this option of enriching the knowledge by enrolling themselves in the Massive Open Online Courses (MOOC) provided by various portals, such as SWAYAM, NPTEL, etc.

11. Programme of Study

The Programme of study for the Degree shall be in the Branch – Mathematics (Choice Base Credit System) with internal assessment comprised of instructions in the following subjects according to the syllabi and books prescribed from time to time.

12. Credit

Weightage given to each course of study is termed as Credit.

13. Credit System

The weightage of credits are spread over to four different semesters during the period of study and the cumulative credit point average shall be awarded based on the credits earned by the student. A total of 90 Credits are prescribed for the M.Sc Mathematics Degree Programme which is the minimum Credit requirement for the two year M.Sc Mathematics Degree Programme.

Three domains:

(i) Cognitive Domain

(Lower levels: K1: Remembering ; K2: Understanding ; K3: Applying;

Higher levels: K4: Analysing ; K5: Evaluating; K6: Creating)

(ii) Affective Domain

(iii) Psychomotor Domain

14. Break-up of Marks and Credits

The break-up of marks and credits for the M.Sc. Mathematics Degree Programme is as follows

Course	Number of Courses	Total Marks	Total Credits
Core Courses (Theory/Project)	12	1200	57
Elective Courses	06	600	18
Common Course	03	300	06
Project	01	100	07
Internship / Industrial Activity	01	100	02
Extension Activity	01	100	01
Grand Total	24	2400	91

*The students are advised to complete a **SWAYAM/MOOC** before the completion of the 3rd semester and submit the course completion certificate to the HOD. Extra Two credits will be given to the candidates who have successfully completed.

15. Examinations

The examinations consist of Continuous Internal Assessment (CIA) and end of semester examinations (ESE). The ESE shall be of Three Hours duration for each theory course at the end of every semester. The candidate failing in any course(s) will be permitted to appear for each failed course(s) in the subsequent examination. At the end of fourth semester, the Project Viva-voce will be conducted on the basis of the Dissertation/Project Report of the students by the evaluation of one internal and one external examiner.

To maintain uniformity, particularly for interdepartmental transfer of credits, there shall be a uniform pattern of examination to be adopted by all the teachers offering courses. There shall be three tests, one seminar and one assignment for CIA and ESE during each semester. The distribution of marks for CIA and ESE shall be 25 marks and 75 marks, respectively. Further, the distribution of CIA will be 10 marks for test, 5 marks for seminar 5 marks for assignment and 5 marks for problem solving. The average of the highest two test marks out of the three CIA tests will be taken for CIA.

16. Components of Continuous Internal Assessment (CIA)

Components		Marks	Total Marks
Theory			
CIA I	75	(75+75 = 150/15) 10	25
CIA II	75		
Seminar		05	
Assignment		05	
Problem Solving		05	
Project			
Literature Collection		10	40
Data Collection		10	
Methodology		10	
Presentation of Result		10	

17. Question Paper Pattern

Bloom's Taxonomy Based Assessment Pattern

(K1 – Remember; K2 – Understand; K3 – Apply; K4 – Analyze; K5 – Evaluate)

(i) Theory Examinations (CIA I & CIA II = 25 Marks and ESE = 75 Marks)

Knowledge Level	Section	Marks	Description	Total Marks
K1	A (Answer ALL) Q1–Q15	$15 \times 1 = 15$	Multiple Choice Questions (MCQ) (Three questions from each unit)	15
K2	B (Answer any TWO out of FIVE) Q16–Q20	$5 \times 3 = 15$	Short Answers (One question from each unit)	15
K3 & K4	C (Either or Pattern) Q20–Q25	$5 \times 9 = 45$	Descriptive/Detailed Answers (Two questions from each unit)	45
Total Marks				75

Passing Minimum (CIA) 50% = 12 Marks

Passing Minimum (ESE) 50% = 38 Marks

50 Marks

(ii) Project Viva-Voce (CIA = 40 Marks and ESE = 60 Marks)

Knowledge Level	Section	Marks	Total Marks
K3, K4 & K5	Project Dissertation	40	60
	Viva-voce	20	

Passing Minimum (CIA) 50% = 20 Marks

Passing Minimum (ESE) 50% = 30 Marks

50 Marks

The candidate shall be declared to have passed the examination if the candidates secure not less than 38 marks out of 75 marks in the semester examination in each theory course and 12 marks out of 25 marks in the CIA and in total not less than 50 marks.

For the practical course, 30 marks out of 60 marks in the semester examination and the record notebook taken together and 20 marks out of 40 marks in the CIA and in total 50 marks. There is no passing minimum for the record notebook. However, submission of the record notebook is necessary.

For the project work and Viva-voce, a candidate should secure 50% of the marks for pass. The candidate should compulsorily attend the Viva-voce examination to secure a pass in the project.

Candidate who does not obtain the required minimum marks for a pass in a Course/Practical/Project/Dissertation shall be declared Re-Appear (RA) and the candidate has to appear and pass the same at a subsequent appearance.

18. Dissertation

(a) Topic: The topic of the dissertation shall be assigned to the candidate before the beginning of third semester and a copy of the same should be submitted to the Department Approval.

(b) Number of Project/Dissertation copies to be submitted by the students

The students should prepare three copies of dissertation and submit the same for the evaluation by Examiners. After evaluation, one copy is to be retained in the College Library and one copy is to be submitted to the COE and the student can have the rest.

(c) Format to be followed

The format of the Project/Dissertation to be prepared and submitted by the students in Semester IV is given below:

**Format for the preparation of Project Work:****(i) Title Page:****TITLE OF THE PROJECT/DISSERTATION**

Project/Dissertation Submitted in partial fulfilment of the requirement for the award of the Degree of Master of Science in Mathematics (under Choice Base Credit System) to the Sri Vidya Mandir Arts & Science College (Autonomous)-Katteri, Uthangarai.

By

(Month and Year)

(ii) Declaration by the Student

Name of the Student _____

Register No. _____

PG & Research Department of Mathematics

Sri Vidya Mandir Arts & Science College (Autonomous)

Katteri – 636 902, Uthangarai, Krishnagiri District.

Declaration by the Student

I hereby declare that the dissertation entitled _____ submitted by me for the award of **Master of Science (M.Sc.) Degree in Mathematics**, carried out in the **PG and Research Department of Mathematics, Sri Vidya Mandir Arts and Science College (Autonomous), Uthangarai, Krishnagiri – 636 902.**

Date:

Place:

Signature of the Student

**(ii) Bonafide Certificate****Bonafied Certificate**

This is to certify that the dissertation entitled “.....” submitted in partial fulfilment of the requirement of the award of the **Degree of Master of Science in Mathematics** (Under Choice Based Credit System) to the Sri Vidya Mandir Arts & Science College, is a record of bonafide research work carried out by under my supervision and guidance and that no part of the dissertation has been submitted for the award of any degree, diploma, fellowship or other similar titles or prizes and that the work has not been published in part or full in any scientific or popular journals or magazines.

Date:

Place:

Signature of the Head of the Department**Signature of the Guide****(iii) Acknowledgement**

(Drafted by the Student)

(iv) Table of Contents

Chapter No.	Title	Page No.
1	Introduction	
2	Review of Literature	
3	Materials and Methods	
4	Results and Discussion	
5	Summary/Concuision	
	References	

19. Maximum Duration for the Completion of the M.Sc.Mathematics Programme

The maximum duration for completion of the M.Sc. Mathematics Programme shall not exceed eight semesters.

20. Commencement of this Regulation

This regulation and syllabus shall take effect from the academic year 2020–2021 for students who are admitted to the first year of the Programme during the academic year 2020–2021 and thereafter.

21. GRADING

Once the marks of the cumulative CIA and ESE are available, they will be added. The marks thus obtained will then be graded as per details given below:

Marks and Grades

The following table gives the marks grade points, letter grades and classification to indicate the performance of the candidate.

Range of Marks	Grade Points	Letter Grade	Description
90–100	9.0–10.0	O	Outstanding
80–89	8.0–8.9	D+	Excellent
75–79	7.5–7.9	D	Distinction
70–74	7.0–7.4	A+	Very Good
60–69	6.0–6.9	A	Good
50–59	5.0–5.9	B	Average
00–49	0.0	U	Re-appear
ABSENT	0.0	AAA	ABSENT

C_i = Credits earned for course i in any semester

G_i = Grade Point obtained for course i in any semester

n = Semester in which such course were credited

Grade point average (for a Semester)

Calculation of grade point average semester-wise and part-wise is as follows:

$$\text{GRADE POINT AVERAGE [GPA]} = \frac{\sum C_i G_i}{\sum C_i}$$

$$\text{GPA} = \frac{\text{Sum of the multiplication of grade points by the credits of the courses under each part}}{\text{Sum of the credits of the courses under each part in a semester}}$$

Calculation of Grade Point Average (CGPA) (for the entire programme)

A candidate who has passed all the examinations under different parts is eligible for the following part wise computed final grades based on the range of CGPA.

$$\text{CUMULATIVE GRADE POINT AVERAGE [CGPA]} = \frac{\sum_n \sum_i C_{ni} G_{ni}}{\sum_n \sum_i C_{ni}}$$

$$\text{GPA} = \frac{\text{Sum of the multiplication of grade points by the credits of the entire program under each part}}{\text{Sum of the credits of the courses of the entire program under each part}}$$

22. Classification of Successful Candidates

A candidate who passes all the examinations and securing following CGPA and Grades shall be declared as follows:

CGPA	GRADE	CLASSIFICATION OF FINAL RESULT
9.5–10.0	O+	First Class – Exemplary
9.0 and above but below 9.5	O	
8.5 and above but below 9.0	D++	First Class with Distinction
8.0 and above but below 8.5	D+	
7.5 and above but below 8.0	D	
7.0 and above but below 7.5	A++	First Class
6.5 and above but below 7.0	A+	
6.0 and above but below 6.5	A	
5.5 and above but below 6.0	B+	Second Class
5.0 and above but below 5.5	B	

23. Ranking

A candidate who qualifies for the M.Sc. Mathematics, passing all the Examinations in the first attempt within the minimum period prescribed for the Programme from the date of admission to the Programme and secures first or second class shall be eligible for ranking and such ranking will be confined to 10% of the total number of candidates qualified in that particular subject to a maximum of 10 ranks.

**24. Conferment of the Degree**

No candidate shall be eligible for conferment of the Degree unless he/she has undergone the prescribed Programme of study for a period of not less than four Semesters in an Institution and earns has passed the Examinations as have been prescribed.

25. Transitory Provision

Candidates who have undergone the Programme of Study prior to the Academic Year 2023-2024 will be permitted to take the Examinations under those Regulations for a period of four years i.e. up to and inclusive of the Examination of April 2024. Thereafter, they will be permitted to take the Examination only under the Regulations in force at that time.

		2.6 NME-I	2	3.6 NME-II	2	4.6 Extension Activity	1
		2.7 Human Rights	2	3.7 Internship/ Industrial Activity	2		
	20		24		26		23
Total Credit Points							93

Core - Papers = 57

Elective (Generic / Discipline Centric) = 18

Skill Enhancement Course = 02

NME(4) and Human Rights(2) = 06

Internship / Industrial Activity = 02

Project Viva Voce = 07

Extension Activity = 01

Total Credits = 93

Component wise Credit Distribution

Credits	Sem I	Sem II	Sem III	Sem IV	Total
Part A	20	20	22	20	82
Part B		2	2		4
(i) Discipline – Centric / Generic Skill					
(ii) Soft Skill	-	-	-	2	4
(iii) Summer Internship / Industrial Training	-	-	2	-	
Part C				3	3
Total	20	22	26	23	93

Part A component and Part B (i) will be taken into account for CGPA calculation for the postgraduate programme and the other components Part B and Part C have to be completed during the duration of the programme as per the norms, to be eligible for obtaining the PG degree

M.Sc., Mathematics

Programme Specific Outcomes:

PSO1: Acquire good knowledge and understanding, to solve specific theoretical & applied problems in different area of mathematics & statistics.

PSO2: Understand, formulate, develop mathematical arguments, logically and use quantitative models to address issues arising in social sciences, business and other context /fields.

PSO3: To prepare the students who will demonstrate respectful engagement with other's ideas, behaviors, beliefs and apply diverse frames of references to decisions and actions.

To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations.

To encourage practices grounded in research that comply with employment laws, leading the organization towards growth and development.

Mapping of Course Learning Outcomes (CLOs) with Programme Outcomes (POs) and Programme Specific Outcomes (PSOs) can be carried out accordingly, assigning the appropriate level in the grids:

	Pos						...	PSOs		
	1	2	3	4	5	6		1	2	...
CLO1										
CLO2										
CLO3										
CLO4										
CLO5

Cycle Test or similar	2	4
Model Test or similar	1	3
University Exam Preparation	1	3
Total		90 periods

1. Tutorial Activities

Tutorial Count	Topic

2. Laboratory Activities

3. Field Study Activities

4. Assessment Activities

Assessment Principles:

Assessment for this course is based on the following principles

1. Assessment must encourage and reinforce learning.
2. Assessment must measure achievement of the stated learning objectives.
3. Assessment must enable robust and fair judgments about student performance.
4. Assessment practice must be fair and equitable to students and give them the opportunity to demonstrate what they learned.
5. Assessment must maintain academic standards.

Assessment Details:

Assessment Item	Distributed Due Date	Weightage	Cumulative Weightage
Assignment 1	3 rd week	2%	2%
Assignment 2	6 th Week	2%	4%
Cycle Test – I	7 th Week	6%	10%
Assignment 3	8 th Week	2%	12%
Assignment 4	11 th Week	2%	14%
Cycle Test – II	12 th Week	6%	20%
Assignment 5	14 th Week	2%	22%
Model Exam	15 th Week	13%	35%
Attendance	All weeks as per the Academic Calendar	5%	40%
University Exam	17 th Week	60%	100%

Total Credits						91

Elective Courses

Courses are grouped (Group A to Group F) so as to include topics from Pure Mathematics(PM), Applied Mathematics(AM), Industrial Components(IC) and IT Oriented(ITC) courses for flexibility of choice by the stakeholders / institutions.

Semester I : Elective I and Elective II

Elective I to be chosen from Group A and **Elective II** to be chosen from Group B

Group A: (PM/AP/IC/ITC)

1. Number Theory and Cryptography
2. Graph Theory and Applications
3. Formal Languages and Automata Theory
4. Programming in C++ and Numerical Methods

Group B:(PM/AP/IC/ITC)

1. Lie Groups and Lie Algebras
2. Mathematical Programming
3. Fuzzy Sets and Their Applications
4. Discrete Mathematics

Semester II : Elective III & Elective IV

Elective III to be chosen from **Group C** and **Elective IV** to be chosen from **Group D**

Group C:(PM/AP/IC/ITC)

1. Algebraic Topology
2. Mathematical Statistics
3. Statistical Data Analysis using R Programming
4. Tensor Analysis and Relativity

Group D :(PM/AP/IC/ITC)

1. Wavelets
2. Modeling and Simulation with Excel
3. Machine Learning and Artificial Intelligence
4. Neural Networks

**Semester III : Elective V**

Elective V to be chosen from Group E.

Group E: (PM/AP/IC/ITC)

1. Algebraic Number Theory
2. Fluid Dynamics
3. Stochastic Processes
4. Mathematical Python

Semester IV : Elective VI

Elective VI to be chosen from Group F.

Group F:(PM/AP/IC/ITC)

1. Algebraic Geometry
2. Financial Mathematics
3. Resource Management Techniques
4. Mathematical Python

Skill Enhancement Courses

Skill Enhancement Courses are chosen so as to keep in pace with the latest developments in the academic / industrial front and provides flexibility of choice by the stakeholders / institutions.

Group G (Skill Enhancement Courses) SEC:

- Computational Mathematics using SageMath
- Mathematical documentation using LATEX / other packages
- Office Automation and ICT Tools
- Numerical analysis using SCILAB
- Differential equations using SCILAB
- Industrial Mathematics /Statistics using latest programming packages
- Research Tools and Techniques

Extra Disciplinary Courses for other Departments (not for Mathematics students)

- Students from other Departments may also choose any one of the following as Extra Disciplinary Course.
- ED-I: Mathematics for Life Sciences
- ED-II: Mathematics for Social Sciences
- ED-III: Statistics for Life and Social Sciences
- ED-IV: Game Theory and Strategy
- ED-V: History of Mathematics

Instructions for Course Transaction

Courses	Lecture hrs	Tutorial hrs	Lab Practice	Total hrs
Core	75	15	--	90
Electives	75	15	--	90
ED	75	15	--	90
Project	20	--	70	90

Testing Pattern (25+75)

Internal Assessment

Theory Course: For theory courses there shall be three tests conducted by the faculty concerned and the average of the best two can be taken as the Continuous Internal Assessment (CIA) for a maximum of 25 marks. The duration of each test shall be one / one and a half hour.

Computer Laboratory Courses: For Computer Laboratory oriented Courses, there shall be two tests in Theory part and two tests in Laboratory part. Choose one best from Theory part and other best from the two Laboratory part. The average of the best two can be treated as the CIA for a maximum of 25 marks. The duration of each test shall be one / one and a half hour.

There is no improvement for CIA of both theory and laboratory, and, also for University End Semester Examination.

Written Examination: Theory Paper (Bloom's Taxonomy based)

Question paper Model

Intended Learning Skills	Maximum 75 Marks Passing Minimum: 50% Duration : Three Hours
	Part –A (15 x 1 = 15 Marks) Answer ALL questions Each Question carries 1 mark
Memory Recall / Knowledge about the Concepts/ Understanding	Three questions from each UNIT
	Question 1 to Question 15
	Part – B (3 x 5 = 15 Marks) Answer any THREE questions Each questions carries 5 Marks
Descriptions/ Application (problems)	There shall be FIVE questions covering all the five units
	Question 16 to Question 20
	Part-C (5 x 9 = 45 Marks) Answer ALL THE questions Each question carries 9 Marks
Analysis /Synthesis / Evaluation	Either-or Type Both parts of each question from the same UNIT
	Question 21 to Question 25

Each question should carry the course outcome and cognitive level

For instance,

1. [CO1 : K2] Question xxxx
2. [CO3 : K1] Question xxxx

Different Types of Courses

(i) Core Courses (Illustrative)

- | | |
|------------------------------------|-------------|
| 1. Algebra | - 23PMA1C01 |
| 2. Real Analysis - I | - 23PMA1C02 |
| 3. Ordinary Differential Equations | - 23PMA1C03 |
| 4. Advanced Algebra | - 23PMA2C04 |
| 5. Real Analysis - II | - 23PMA2C05 |
| 6. Partial Differential Equations | - 23PMA2C06 |
| 7. Complex Analysis | - 23PMA3C07 |
| 8. Probability Theory | - 23PMA3C08 |
| 9. Topology | - 23PMA3C09 |
| 10. Core Module | - 23PMA3C10 |
| 11. Functional Analysis | - 23PMA4C11 |
| 12. Differential Geometry | - 23PMA4C12 |

(ii) Elective Courses (ED within the Department Experts) (Illustrative)

- | | |
|--|-------------|
| 1. Number Theory and Cryptography | - 23PMA1E01 |
| 2. Graph theory and Applications | - 23PMA1E02 |
| 3. Formal Languages and Automata Theory | - 23PMA1E03 |
| 4. Programming in C++ and Numerical Methods | - 23PMA1E04 |
| 5. Lie Groups and Lie Algebras | - 23PMA1E05 |
| 6. Mathematical Programming | - 23PMA1E06 |
| 7. Fuzzy Sets and Their Applications | - 23PMA1E07 |
| 8. Discrete Mathematics | - 23PMA1E08 |
| 9. Algebraic Topology | - 23PMA2E09 |
| 10. Mathematical Statistics | - 23PMA2E10 |
| 11. Statistical Data Analysis Using R-Programming- | 23PMA2E11 |
| 12. Tensor Analysis and Relativity | - 23PMA2E12 |
| 13. Wavelets | - 23PMA2E13 |
| 14. Modeling And Simulation With Excel | - 23PMA2E14 |
| 15. Machine Learning and Artificial Intelligence | - 23PMA2E15 |

- | | |
|------------------------------------|-------------|
| 16. Neural Networks | - 23PMA2E16 |
| 17. Algebraic Number Theory | - 23PMA3E17 |
| 18. Fluid Dynamics | - 23PMA3E18 |
| 19. Stochastic Processes | - 23PMA3E19 |
| 20. Mathematical Python | - 23PMA3E20 |
| 21. Algebraic Geometry | - 23PMA4E21 |
| 22. Financial Mathematics | - 23PMA4E22 |
| 23. Resource Management Techniques | - 23PMA4E23 |

(iii) Extra Disciplinary Courses for other Departments (not for Mathematics students)

- | | |
|--|-------------|
| 1. ED-I: Mathematics for Life Sciences | - 23PMAED01 |
| 2. ED-II: Mathematics for Social Sciences | - 23PMAED02 |
| 3. ED-III: Statistics for Life and Social Sciences | - 23PMAED03 |
| 4. ED-IV: Game Theory and Strategy | - 23PMAED04 |
| 5. ED-V: History of Mathematics | - 23PMAED05 |

(iv) Skill Enhancement Courses (SEC)

- | | |
|---|--------------|
| 1. Computational Mathematics using Sage Math | - 23PMASEC01 |
| 2. Mathematical documentation using LATEX | - 23PMASEC02 |
| 3. Office Automation and ICT Tools | - 23PMASEC03 |
| 4. Numerical analysis using SCILAB | - 23PMASEC04 |
| 5. Differential equations using SCILAB | - 23PMASEC05 |
| 6. Industrial Mathematics /Statistics using latest programming packages | - 23PMASEC06 |
| 7. Research Tools and Techniques | - 23PMASEC07 |

(v) NME – I & II

- | | |
|---------------------------------------|--------------|
| 1. Operations Research For Management | - 23PMANME01 |
|---------------------------------------|--------------|

(vi) Human Rights

- 23PSOCC01

Syllabus for different Courses of M.Sc Mathematics

Program: M.Sc. Mathematics				
Core-I		Course Code:23PMA1C01		Course Title: Algebraic Structures
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	5	100

Course Objectives

To introduce the concepts and to develop working knowledge on class equation, solvability of groups, finite abelian groups, linear transformations, real quadratic forms

UNIT I :

Counting Principle - Class equation for finite groups and its applications - Sylow's theorems (For theorem 2.12.1, First proof only). Chapter 2: Sections 2.11 and 2.12 (Omit Lemma 2.12.5)

UNIT II:

Solvable groups - Direct products - Finite abelian groups- Modules .Chapter 5 : Section 5.7 (Lemma 5.7.1, Lemma 5.7.2, Theorem 5.7.1), Chapter 2: Section 2.13 and 2.14,(Theorem 2.14.1 only). Chapter 4: Section 4.5.

UNIT-III :

Linear Transformations: Canonical forms –Triangular form - Nilpotent transformations. Chapter 6: Sections 6.4, 6.5

UNIT-IV :

Jordan form - rational canonical form. Chapter 6 : Sections 6.6 and 6.7.

Unit V:

Trace and transpose - Hermitian, unitary, normal transformations, real quadratic form. Chapter 6 : Sections 6.8, 6.10 and 6.11 (Omit 6.9)

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Recall basic counting principle, define class equations to solve problems, explain Sylow’s theorems and apply the theorem to find number of Sylow subgroups

CLO 2: Define Solvable groups, define direct products, examine the properties of finite abelian groups, define modules

CLO 3: Define similar Transformations, define invariant subspace, explore the properties of triangular matrix, to find the index of nilpotence to decompose a space into invariant subspaces, to find invariants of linear transformation, to explore the properties of nilpotent transformation relating nilpotence with invariants.

CLO 4: Define Jordan, canonical form, Jordan blocks, define rational canonical form, define companion matrix of polynomial, find the elementary devices of transformation, apply the concepts to find characteristic polynomial of linear transformation.

CLO 5: Define trace, define transpose of a matrix, explain the properties of trace and transpose, to find trace, to find transpose of matrix, to prove Jacobson lemma using the triangular form, define symmetric matrix, skew symmetric matrix, adjoint, to define Hermitian, unitary, normal transformations and to verify whether the transformation in Hermitian, unitary and normal

Program: M.Sc. Mathematics				
Core-II		Course Code:23PMA1C02		Course Title: Real Analysis I
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	5	100

Course Objectives

To work comfortably with functions of bounded variation, Riemann-Stieltjes Integration, convergence of infinite series, infinite product and uniform convergence and its interplay between various limiting operations.

Unit I : Functions of bounded variation

Introduction - Properties of monotonic functions - Functions of bounded variation - Total variation - Additive property of total variation - Total variation on $[a, x]$ as a function of x - Functions of bounded variation expressed as the difference of two increasing functions - Continuous functions of bounded variation. Chapter – 6 : Sections 6.1 to 6.8

Infinite Series :

Absolute and conditional convergence - Dirichlet's test and Abel's test - Rearrangement of series - Riemann's theorem on conditionally convergent series. Chapter 8 : Sections 8.8, 8.15, 8.17, 8.18

Unit II: The Riemann - Stieltjes Integral

Introduction - Notation - The definition of the Riemann - Stieltjes integral - Linear Properties - Integration by parts- Change of variable in a Riemann - Stieltjes integral - Reduction to a Riemann Integral – Euler's summation formula - Monotonically increasing integrators, Upper and lower integrals - Additive and linearity properties of upper, lower integrals - Riemann's condition - Comparison theorems. Chapter - 7 : Sections 7.1 to 7.14.

UNIT-III : The Riemann-Stieltjes Integral

Integrators of bounded variation-Sufficient conditions for the existence of Riemann-Stieltjes integrals-Necessary conditions for the existence of RS integrals- Mean value theorems -integrals as a function of the interval – Second fundamental theorem of integral calculus-Change of variable - Second Mean Value Theorem for Riemann integral- Riemann-Stieltjes integrals depending on a parameter- Differentiation under integral sign-Lebesgue criteriaon for existence of Riemann integrals. Chapter - 7 : 7.15 to 7.26.

UNIT-IV : Infinite Series and infinite Products

Double sequences - Double series - Rearrangement theorem for double series - A sufficient condition for equality of iterated series - Multiplication of series – Cesaro summability - Infinite products. Chapter - 8 Sec, 8.20, 8.21 to 8.26

Power series: Multiplication of power series - The Taylor's series generated by a function - Bernstein's theorem - Abel's limit theorem - Tauber's theorem. Chapter 9 : Sections 9.14, 9.15, 9.19, 9.20, 9.22, 9.23

UNIT-V: Sequences of Functions

Pointwise convergence of sequences of functions - Examples of sequences of real - valued functions - Uniform convergence and continuity - Cauchy condition for uniform convergence - Uniform convergence of infinite series of functions - Riemann - Stieltjes integration – Non-uniform Convergence and Term-by-term Integration - Uniform convergence and differentiation - Sufficient condition for uniform convergence of a series - Mean convergence. Chapter -9 Sec 9.1 to 9.6, 9.8,9.9,9.10,9.11, 9.13

<http://www.opensource.org>, www.mathpages.com

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Analyze and evaluate functions of bounded variation and Rectifiable Curves.

CLO2: Describe the concept of Riemann-Stieltjes integral and its properties.

CLO3: Demonstrate the concept of step function, upper function, Lebesgue function and their integrals.

CLO4: Construct various mathematical proofs using the properties of Lebesgue integrals and establish the Levi monotone convergence theorem.

CLO5: Formulate the concept and properties of inner products, norms and measurable functions.

Program: M.Sc. Mathematics				
Core-III		Course Code: 23PMA1C03		Course Title: Ordinary Differential Equations
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	4	100

Course Objectives

To develop strong background on finding solutions to linear differential equations with constant and variable coefficients and also with singular points, to study existence and uniqueness of the solutions of first order differential equations

UNIT- I : Linear equations with constant coefficients

Second order homogeneous equations-Initial value problems-Linear dependence and independence-Wronskian and a formula for Wronskian-Non-homogeneous equation of order two. Chapter 2: Sections 1 to 6

UNIT- II: Linear equations with constant coefficients

Homogeneous and non-homogeneous equation of order n –Initial value problems- Annihilator method to solve non-homogeneous equation- Algebra of constant coefficient operators. Chapter 2 : Sections 7 to 12.

UNIT-III : Linear equation with variable coefficients

Initial value problems -Existence and uniqueness theorems – Solutions to solve a non-homogeneous equation – Wronskian and linear dependence – reduction of the order of a homogeneous equation – homogeneous equation with analytic coefficients-The Legendre equation. Chapter : 3 Sections 1 to 8 (Omit section 9).

UNIT-IV : Linear equation with regular singular points

Euler equation – Second order equations with regular singular points –Exceptional cases – Bessel Function. Chapter 4 : Sections 1 to 4 and 6 to 8 (Omit sections 5 and 9).

UNIT-V: Existence and uniqueness of solutions to first order equations

Equation with variable separated – Exact equation – method of successive approximations – the Lipschitz condition – convergence of the successive approximations and the existence theorem. Chapter 5 : Sections 1 to 6 (Omit Sections 7 to 9)

<http://www.opensource.org>, www.mathpages.com

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Establish the qualitative behavior of solutions of systems of differential equations .

CLO2: Recognize the physical phenomena modeled by differential equations and dynamical systems.

CLO3: Analyze solutions using appropriate methods and give examples.

CLO4: Formulate Green's function for boundary value problems.

CLO5: Understand and use various theoretical ideas and results that underlie the mathematics in this course.

**ELECTIVE COURSES**

Courses are grouped (Group A to Group F) so as to include topics from Pure Mathematics(PM), Applied Mathematics(AM), Industrial Components(IC) and IT Oriented(ITC) courses for flexibility of choice by the stakeholders / institutions.

Semester I : Elective I and Elective II

Elective I to be chosen from Group A and **Elective II** to be chosen from Group B

Program: M.Sc. Mathematics				
Elective-I		Course Code: 23PMA1E01		Course Title: Number Theory And Cryptography
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

- To understand fundamental number-theoretic algorithms such as the Euclidean algorithm, the Chinese Remainder algorithm, binary powering, and algorithms for integer arithmetic.
 - To understand fundamental algorithms for symmetric key and public-key cryptography.
 - To understand the number-theoretic foundations of modern cryptography and the principles behind their security.
- To implement and analyze cryptographic and number-theoretical algorithms.

UNIT-I: Elementary Number Theory:

Time Estimates for doing arithmetic – divisibility and Euclidean algorithm – Congruences – Application to factoring. Chapter 1.

UNIT-II: Introduction to Classical Crypto systems – Some simple cryptosystems – Enciphering matrices DES. Chapter 3

UNIT-III: Finite Fields, Quadratic Residues and Reciprocity (Chapter 2)

UNIT-IV: Public Key Cryptography. Chapter 4

UNIT-V: Primality, Factoring, Elliptic curves and Elliptic curve cryptosystems. (Chapter 5, sections 1,2,3 &5 (omit section 4), Chapter 6, sections 1& 2 only)

Text Book: Neal Koblitz, A Course in Number Theory and Cryptography, Springer-Verlag, New York, 1987.

Reference Books:

3. https://onlinecourses-archive.nptel.ac.in/noc17_cs36/preview

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Illustratetheimplicationsof properties of divisibility and primes

CLO 2: Distinguish the DES and the AES.

CLO 3: Understanding the Law of Quadratic Reciprocity & Quadratic Residues.

CLO 4: Define the fundamentals of cryptography, such as encryption, Authentication anddigital signature.

CLO 5:Explain how elliptic curves are used in certain Crypto-graphic algorithms.

Program: M.Sc. Mathematics				
Elective-I		Course Code: 23PMA1E02		Course Title: Graph Theory And Applications
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

- Understand the basics of graph theory and their various properties.
- Model problems using graphs and to solve these problems algorithmically.
- Apply graph theory concepts to solve real world applications like routing, TSP/traffic control, etc.
- Optimize the solutions to real problems like transport problems etc.,

UNIT- I : Basic Results

Introduction-Basic Concepts-Subgraphs- Degrees of Vertices - Paths and Connectedness - Automorphism of a Simple Graph. (Chapter 1: Sections 1.1 - 1.6). Directed Graphs: Introduction-Basic Concepts-Tournaments.(Chapter 2 : Sections 2.1 - 2.3).

UNIT- II: Connectivity and Trees

Connectivity: Introduction-Vertex cut and Edge Cut-Connectivity and Edge Connectivity.(Chapter 3: Sections 3.1- 3.3). Trees: Introduction-Definition, Characterization and Simple Properties-Centers and Centroids- Cutting the Number of Spanning Trees-Cayley's Formula. (Chapter 4: Sections 4.1- 4.5).

UNIT-III :

Independent Sets, Matchings and Cycles: Independent Sets and Matchings: Introduction-Vertex-Independent Sets and Vertex Coverings-Edge-Independent sets-Matchings and Factors-Matchings in Bipartite Graphs. (Chapter 5: Sections 5.1- 5.5) . Cycles: Introduction- Eulerian Graphs-Hamiltonian Graphs. (Chapter 6: Sections 6.1- 6.3) .

UNIT-IV : Graph Colorings

Introduction-Vertex colorings-Critical Graphs-Edge colorings of Graphs-Kirkman's Schoolgirl-Problem- Chromatic Polynomials.(Chapter 7: Sections 7.1 ,7.2 ,7.3 (7.2.1 & 7.2.3 only) ,7.6, 7.8, and 7.9).

UNIT-V: Planarity

Introduction- Planar and Nonplanar Graphs –Euler Formula and its Consequences K_5 and $K_{3,3}$ are Nonplanar Graphs – Dual of a Plane Graph- The Four-Color Theorem and Five- Color Theorem- Hamiltonian Plane Graphs-Tait Coloring.(Chapter 8: Sections 8.1 - 8.6 ,8.8 and 8.9).

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Understand and explore the basics of graph theory.

CLO 2: Analyse the significance of graph theory in different disciplines.

CLO 3: Demonstrate algorithms used in interdisciplinary domains.

CLO 4: Evaluate or synthesize any real world applications using graph theory.

CLO 5: Evaluate the different types of Graphs.

Program: M.Sc. Mathematics				
Elective-I		Course Code: 23PMA1E03		Course Title: Formal Languages And Automata Theory
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

- To teach the student to identify different formal language classes and their relationships
- To teach the student the theoretical foundation for designing compilers.
- To teach the student to use the ability of applying logical skills.
- Teach the student to prove or disprove theorems in automata theory using its properties.
- To teach the student the techniques for information processing.
- Understand the theory behind engineering applications.

UNIT- I: Fundamentals

Strings, Alphabet, Language, Operations, Finite state machine, definitions, finite automaton model, acceptance of strings, and languages, FA, transition diagrams and Language recognizers.

Finite Automata: Deterministic finite automaton, Non deterministic finite automaton and NFA with ϵ transitions - Significance, acceptance of languages. Conversions and Equivalence : Equivalence between NFA with and without ϵ transitions, NFA to DFA conversion, minimization of FSM, equivalence between two FSMs, Finite Automata with output- Moore and Melay machines.

UNIT- II: Regular Languages

Regular sets, regular expressions, identity rules, Conversion finite Automata for a given regular expressions, Conversion of Finite Automata to Regular expressions. Pumping lemma of regular sets, closure properties of regular sets (proofs not required).

UNIT-III : Context Free Grammars

Ambiguity in context free grammars. Minimisation of Context Free Grammars. Chomsky normal form, Greibach normal form, Pumping Lemma for Context Free Languages. Enumeration of properties of CFL (proofs omitted).

UNIT-IV : Push Down Automata

Push down automata, definition, model, acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence. Equivalence of CFL and PDA, interconversion. (Proofs not required). Introduction to DCFL and DPDA. LINEAR BOUNDED AUTOMATA(LBA):LBA, context sensitive grammars, CS languages.

UNIT-V: Turing Machine

Turing Machine, definition, model, design of TM, Computable functions, recursively enumerable languages. Church's hypothesis, counter machine, types of Turing machines (proofs not required).

Computability Theory: Chomsky hierarchy of languages, linear bounded automata and context sensitive language, LR(0) grammar, decidability of, problems, Universal Turing Machine, undecidability of posts. Correspondence problem, Turing reducibility, Definition of P and NP problems, NP complete and NP hard problems.

Course Learning Outcome (for Mapping with POs and PSOs)

Student will have the ability to

CLO 1: Apply knowledge in designing or enhancing compilers.

CLO 2: Design grammars and automata (recognizers) for different language classes.

CLO 3: Apply knowledge in developing tools for language processing or text processing.

CLO 4: Make grammars to produce strings from a specific language.

CLO 5: Differentiate regular, context-free and recursively enumerable languages.

Elective-I		Course Code: 23PMA1E04		Course Title: Programming In C++ And Numerical Analysis
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

This courses introduces a higher level language C++ and numerical methods for hands-on experience on computers. Stress is also given on the error analysis.

UNIT- I :

Principles of OOP-Tokens-Expressions, Control Structures-Functions-Classes and Objects-constructors and destructors Chapter 1 to 6

UNIT- II:

Operator Overloading and type Conversions - Inheritance - Pointers, Virtual Functions and Polymorphism-Managing Console I/O Operations-Working with Files . Chapter 7 to 11

UNIT-III : Finite Digit Arithmetic and Errors

Floating point arithmetic - Propagated Error - Generated Error - Error in Evaluation of a function $f(x)$. - Non-linear Equations: Bisection method- Secant Method - Regula Falsi Method - Newton's method - Muller's method - Fixed Point method - Chapters 1,2 : Only 2.1 to 2.6

UNIT-IV : System of Linear Equations

Gauss- Elimination Method - Crout's method - Inverse of a matrix - Condition numbers and errors - Jacobi's method - Gauss-Seidel Method - Relaxation method. Numerical Differentiation and Integration: Numerical Differentiation - Numerical Integration - Newton-Cotes Formulas - GaussianQuadrature - Double Integral Chapter 3 and 5 : 5.1 to 5.5 and 5.7 (omit 5.6)

UNIT-V: Ordinary Differential Equations

Difference equation -Differential Equations:Single Step method-Runge-Kutta Method- Multi-step methods Chapter 6: 6.1 to 6.4 (omit 6.5)

Program: M.Sc. Mathematics				
Elective-II		Course Code:23PMA1E05		Course Title: Lie Groups And Lie Algebras
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

1. In physics, Lie groups appear as symmetry groups of physical systems, and their Lie algebras (tangent vectors near the identity) may be thought of as infinitesimal symmetry motions.
2. Lie algebras and their representations are used extensively in physics, notably in quantum mechanics and particle physics.

UNIT- I : Matrix Lie Groups. Chapter 1.

UNIT- II: The Matrix Exponential. Chapter 2.

UNIT-III : Lie Algebras. Chapter 3.

UNIT-IV : Basic Representation Theory. Chapter 4.

UNIT-V: Semisimple Lie Algebras. Chapter 7.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Demonstrate systematic understanding of key aspects of Matrix Lie

Groups and LieLie groups

CLO 2: Determine the exponential of a matrix.

CLO 3: Differentiate Lie groups and Lie Algebras

CLO 4: Find the representation of $sl(2 ; C)$.

CLO 5: Explain reductive Lie algebra

Program: M.Sc. Mathematics				
Elective-II		Course Code:23PMA1E06		Course Title: Mathematical Programming
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

This course introduces advanced topics in Linear and non-linear Programming.

UNIT- I : Integer Linear Programming

Types of Integer- Linear Programming Problems - Concept of Cutting Plane - Gomory's All Integer Cutting Plane Method - Gomory's mixed Integer Cutting Plane method - Branch and Bound Method. - Zero-One Integer Programming. Dynamic Programming: Characteristics of Dynamic Programming Problem - Developing Optimal Decision Policy - Dynamic Programming Under Certainty - DP approach to solve LPP. Chapter-7: 7.1 - 7.7 Chapter-20: 20.1 - 20.5

UNIT- II: Classical Optimization Methods

Unconstrained Optimization - Constrained Multi-variable Optimization with Equality Constraints - Constrained Multi-variable Optimization with inequality Constraints Non-linear Programming Methods: Examples of NLPP - General NLPP - Graphical solution - Quadratic Programming - Wolfe's modified Simplex Methods - Beale's Method Chapter-23: 23.1 - 23.4 Chapter-24: 24.1 - 24.4.

UNIT-III : Theory Of Simplex Method

Canonical and Standard form of LP - Slack and Surplus Variables - Reduction of any Feasible solution to a Basic Feasible solution - Alternative Optimal solution - Unbounded solution - Optimality conditions - Some complications and their resolutions - Degeneracy and its resolution. Chapter-25: 25.1 - 25.4, 25.6-25.9.

UNIT-IV: Revised Simplex Method

Standard forms for Revised simplex Method - Computational procedure for Standard form I - comparison of simplex method and Revised simplex Method. Bounded Variables LP problem: The simplex algorithm. Chapter-26: 26.1 - 26.4 Chapter-28: 28.1, 28.2.

UNIT-V: Parametric Linear Programming

Variation in the coefficients c_j , Variations in the Right hand side, b_i . Goal Programming: Difference between LP and GP approach - Concept of Goal Programming - Goal Programming Model formulation - Graphical Solution Method of Goal Programming - Modified Simplex method of Goal Programming. Chapter-29: 29.1 - 29.3.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Assess critically the utility of a number of mathematical programming techniques.

CLO 2: Describe mathematical programming solution strategies and techniques.

CLO 3: Use mathematical programming methods to address management decision problems.

CLO 4: Be able to design integrated business systems with a systems approach based on the business requirements by generating and developing multiple alternatives.

CLO 5: Can identify, analyze and develop solutions based on scientific evidence to Industrial Systems Engineering problems encountered in practice.

Program: M.Sc. Mathematics				
Elective-II		Course Code: 23PMA1E07		Course Title: Fuzzy Sets And Their Applications
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

This course introduces advanced topics in Linear and non-linear Programming

UNIT- I : Fuzzy sets

Fuzzy sets – Basic types – Basic concepts - Characteristics – Significance of the paradigm shift – Additional properties of α - Cuts (Chapter 1: Sections 1.3 to 1.5 and Chapter 2: Sections 2.1)

UNIT- II: Fuzzy Sets Versus CRISP Sets

Representation of Fuzzy sets – Extension principle of Fuzzy sets – Operation on Fuzzy Sets – Types of Operation – Fuzzy complements. (Chapter 2: Sections 2.2 to 2.3 and Chapter 3: Sections 3.1 to 3.2)

UNIT-III : Operations on Fuzzy Sets

Fuzzy intersection – t-norms, Fuzzy unions – t conorms – Combinations of operations – Aggregation operations. (Chapter 3: Sections 3.3 to 3.6)

UNIT-IV : Fuzzy Arithmetic

Fuzzy numbers – Linguistic variables – Arithmetic operation on intervals – Lattice of Fuzzy numbers. (Chapter 4: Sections 4.1 to 4.4)

UNIT-V: Constructing Fuzzy Sets

Methods of construction: An overview – Direct methods with one expert – Direct method with multiple experts – indirect method with multiple experts and one expert – Construction from sample data. (Chapter 10: Sections 10.1 to 10.7)

Text Book: .

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Gain the main subject of fuzzy sets, learn crips and fuzzy set theory

CLO 2: Decide the difference between crips set and fuzzy set theory.

CLO 3: Recognize fuzzy logic membership function and fuzzy inference systems.

CLO 4: Make applications on Fuzzy logic membership function and fuzzy inference systems.

CLO 5: Make calculation on fuzy set theory.

Program: M.Sc. Mathematics				
Elective-II		Course Code:23PMA1E08	Course Title: Discrete Mathematics	
Semester	Hours/Week	Total Hours	Credits	Total Marks
I	6	90	3	100

Course Objectives

Work with relations and investigate their properties. Investigate functions as relations and their properties. Introduce basic concepts of graphs, digraphs and trees.

UNIT- I : The Foundations

Logic and Proofs : Propositional - Applications of Propositional -Propositional Equivalences - Predicates and Quantifiers. (Chapter 1: Sections 1.1 - 1.3). Algorithms: The Growth of Functions. (Chapter 3: Section 3.2).

UNIT- II: Counting

The Basics of Counting- The Pigeonhole Principle -Permutations and Combinations - Generalized Permutations and Combinations - Generating Permutations and Combinations . (Chapter 5: Sections 5.1- 5.3, 5.5 and 5.6).

UNIT-III : Advanced Counting Techniques

Applications of Recurrence Relations - Solving Linear Recurrence Relations Generating Functions . (Chapter 6: Sections 6.1, 6.2 and 6.4).

UNIT-IV : Boolean Algebra

Boolean Functions- Representing Boolean Functions - Logic Gates - Minimization of Circuits. (Chapter 10: Sections 10.1 -10.4).

UNIT-V: Modeling Computation Finite-State machines with Output- Finite-State machines with No Output-Turing Machines. (Chapter 12: Sections 12.2, 12.3 and 12.5).

<http://www.opensource.org>, www.mathpages.com

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Verify the correctness of an argument using symbolic logic and truth tables.

CLO 2: Construct proofs using direct proof.

CLO 3: Proof by contradiction, and proof by cases, or mathematical induction.

CLO 4: Solve problems using counting techniques and combinatorics.

CLO 5: Determine properties of relations, identify equivalence and partial order relations.

Program: M.Sc. Mathematics				
Core-IV		Course Code: 23PMA2C04		Course Title: Advanced Algebra
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	5	100

Course Objectives

To study field extension, roots of polynomials, Galois Theory, finite fields, division rings, solvability by radicals and to develop computational skill in abstract algebra.

UNIT- I :

Extension fields – Transcendence of e . Chapter 5: Section 5.1 and 5.2.

UNIT- II:

Roots of Polynomials.- More about roots. Chapter 5: Sections 5.3 and 5.5.

UNIT-III :

Elements of Galois theory. Chapter 5 : Section 5.6

UNIT-IV :

Finite fields - Wedderburn's theorem on finite division rings. Chapter 7: Sections 7.1 and 7.2 (Theorem 7.2.1 only).

UNIT-V:

Solvability by radicals - A theorem of Frobenius - Integral Quaternions and the Four - Square theorem. Chapter 5: Section 5.7 (omit Lemma 5.7.1, Lemma 5.7.2 and Theorem 5.7.1)
Chapter 7 : Sections 7.3 and 7.4

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Prove theorems applying algebraic ways of thinking.

CLO2: Connect groups with graphs and understanding about Hamiltonian graphs.

CLO3: Compose clear and accurate proofs using the concepts of Galois Theory.

CLO4: Bring out insight into Abstract Algebra with focus on axiomatic theories.

CLO5: Demonstrate knowledge and understanding of fundamental concepts including extension fields, Algebraic extensions, Finite fields, Class equations and Sylow's theorem.

Program: M.Sc. Mathematics				
Core-V		Course Code:23PMA2C05	Course Title: Real Analysis-II	
Semester II	Hours/Week 6	Total Hours 90	Credits 5	Total Marks 100

Course Objectives

To introduce measure on the real line, Lebesgue measurability and integrability, Fourier Series and Integrals, in-depth study in multivariable calculus.

UNIT- I : Measure on the Real line

Lebesgue Outer Measure - Measurable sets - Regularity - Measurable Functions - Borel and Lebesgue Measurability. Chapter - 2 Sec 2.1 to 2.5 (de Barra).

UNIT- II: Integration of Functions of a Real variable

Integration of Non- negative functions - The General Integral - Riemann and Lebesgue Integrals. Chapter - 3 Sec 3.1,3.2 and 3.4 (de Barra).

UNIT-III : Fourier Series and Fourier Integrals

Introduction - Orthogonal system of functions - The theorem on best approximation - The Fourier series of a function relative to an orthonormal system - Properties of Fourier Coefficients - The Riesz-Fischer Theorem - The convergence and representation problems in for trigonometric series - The Riemann - Lebesgue Lemma - The Dirichlet Integrals - An integral representation for the partial sums of Fourier series - Riemann's localization theorem - Sufficient conditions for convergence of a Fourier series at a particular point - Cesaro summability of Fourier series - Consequences of Fejes's theorem - The Weierstrass approximation theorem. Chapter 11 : Sections 11.1 to 11.15 (Apostol).

UNIT-IV : Multivariable Differential Calculus

Introduction - The Directional derivative - Directional derivative and continuity - The total derivative - The total derivative expressed in terms of partial derivatives - The matrix of linear function - The Jacobian matrix - The chain rule - Matrix form of chain rule - The mean - value theorem for differentiable functions - A sufficient condition for differentiability - A sufficient condition for equality of mixed partial derivatives - Taylor's theorem for functions of \mathbb{R}^n to \mathbb{R}^1 . Chapter 12 : Section 12.1 to 12.14 (Apostol).

UNIT-V: Implicit Functions and Extremum Problems

Functions with non-zero Jacobian determinants – The inverse function theorem-The Implicit function theorem-Extrema of real valued functions of severable variables-Extremum problems with side conditions. Chapter 13 : Sections 13.1 to 13.7 (Apostol).

Text Books:

1. G. de Barra, Measure Theory and Integration, Wiley Eastern Ltd., New Delhi, 1981. (for Units I and II).

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Understand and describe the basic concepts of Fourier series and Fourier integrals with respect to orthogonal system.

CLO2: Analyze the representation and convergence problems of Fourier series.

CLO3: Analyze and evaluate the difference between transforms of various functions.

CLO4: Formulate and evaluate complex contour integrals directly and by the fundamental theorem.

CLO5: Apply the Cauchy integral theorem in its various versions to compute contour integration.

Program: M.Sc. Mathematics				
Core-VI		Course Code:23PMA2C06		Course Title: Partial Differential Equations
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	4	100

Course Objectives

To classify the second order partial differential equations and to study Cauchy problem, method of separation of variables, boundary value problems.

UNIT- I : Mathematical Models and Classification of second order equation

Classical equations-Vibrating string – Vibrating membrane – waves in elastic medium – Conduction of heat in solids – Gravitational potential – Second order equations in two independent variables – canonical forms – equations with constant coefficients – general solution. Chapter 2 : Sections 2.1 to 2.6, Chapter 3 : Sections 3.1 to 3.4 (Omit 3.5).

UNIT- II: Cauchy Problem

The Cauchy problem – Cauchy-Kowalewsky theorem – Homogeneous wave equation – Initial Boundary value problem- Non-homogeneous boundary conditions – Finite string with fixed ends – Non-homogeneous wave equation – Riemann method – Goursat problem – spherical wave equation – cylindrical wave equation. Chapter 4 : Sections 4.1 to 4.11.

UNIT-III : Method of separation of variables

Separation of variable- Vibrating string problem – Existence and uniqueness of solution of vibrating string problem - Heat conduction problem – Existence and uniqueness of solution of heat conduction problem – Laplace and beam equations. Chapter 6 : Sections 6.1 to 6.6 (Omit section 6.7).

UNIT-IV : Boundary Value Problems

Boundary value problems – Maximum and minimum principles – Uniqueness and continuity theorem – Dirichlet Problem for a circle , a circular annulus, a rectangle – Dirichlet problem involving Poisson equation – Neumann problem for a circle and a rectangle. Chapter 8 : Sections 8.1 to 8.9.

UNIT-V: Green's Function

The Delta function – Green's function – Method of Green's function – Dirichlet Problem for the Laplace and Helmholtz operators – Method of images and eigen functions – Higher dimensional problem – Neumann Problem. Chapter 10 : Section 10.1 to 10.9.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: To understand and classify second order equations and find general solutions

CLO2: To analyse and solve wave equations in different polar coordinates

CLO3: To solve Vibrating string problem, Heat conduction problem, to identify and solve Laplace and beam equations

CLO4: To apply maximum and minimum principle's and solve Dirichlet, Neumann problems for various boundary conditions

CLO5: To apply Green's function and solve Dirichlet, Laplace problems, to apply Helmholtz operation and to solve Higher dimensional problem.

**Semester II : Elective III and Elective IV**

Elective III to be chosen from Group C and **Elective IV** to be chosen from Group D

Program: M.Sc. Mathematics				
Elective - III		Course Code:23PMA2E09		Course Title: Algebraic Topology
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	3	100

Course Objectives

To introduce the ideas of algebraic topology to other branches of Mathematics

UNIT I : Calculus In The Plane: Path Integrals

Angles and Deformations - Differential forms and path Integrals - Independence of Path - Criterion for exactness. Angles and Deformations: Angle functions and Winding numbers - Reparametrizing and Deforming the Paths. Winding Numbers. Definition - Homotopy and Reparametrization - Varying the Point - Degrees and Local Degrees. Chapter 1 : (a) to (c); Chapter 2: only (a) and (b) Chapter 3 : (a) to (d)

UNIT II: Cohomology And Homology

De Rham Cohomology and the Jordan Curve Theorem. Definition of the De Rham Graphs - The Coboundary map - the Jordan Curve Theorem - Applications and Variations. Homology: Chains, Cycles, and H₀U - Boundaries, H₁U, and Winding Numbers - Chains on Grids - Maps and Homology - The First Homology Group for General Spaces. Chapter 5: (a) to (d) Chapter 6: (a) to (e).

UNIT-III : Holes And Integrals

Multiply connected regions - Integrations over continuous Paths and Chains - Periods of Integrals - Complex Integration Mayer-Victoris: The Boundary map - Mayer-Victoris for Homology - Variations and applications - Mayer-Victoris for Cohomology. Chapter 9: (a) to (d) Chapter 10: (a) to (d).

UNIT-IV : Covering Spaces And Fundamental Groups

Covering Spaces: Definition - Lifting paths and Homotopies - G-coverings - Covering Transformations. The Fundamental Groups: Definitions and Basic Properties - Homotopy - Fundamental Group and Homology. Fundamental Groups and Covering Spaces: Fundamental Group and Coverings - Automorphisms of Coverings - The Universal Covering - Coverings and Subgroups of the Fundamental Group Chapter 11 : (a) to (d) Chapter 12 : (a) to (c) Chapter 13: (a) to (d)

UNIT-V: The Van Kampen Theorem G-Coverings from the Universal Covering - Patching Coverings together - The Van Kampen Theorem Cohomology: Patching Coverings and Cech cohomology - Cech Cohomology and Homology - De Rham Cohomology and Homology - Proof of Mayer-Victoris for De Rham Cohomology. Chapter 14 : (a) to (d) ; Chapter 15: (a) to (d)

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Demonstrate accurate and efficient use of algebraic topology techniques.

CLO2: Demonstrate capacity for mathematical reasoning through analyzing, proving and explaining concepts from algebraic topology.

CLO3: Apply problem-solving using algebraic topology techniques applied to diverse situations in physics, engineering and other mathematical contexts

CLO4: Explain the fundamental concepts of algebraic topology and their role in modern mathematics and applied contexts.

CLO5: Demonstrate an understanding of the concepts of metric spaces and topological spaces, and their role in mathematics.

Program: M.Sc. Mathematics				
Elective - III		Course Code:23PMA2E10	Course Title: Mathematical statistics	
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	3	100

Course Objectives

Calculate probabilities, and derive the marginal and conditional distributions of bivariate random variables. Upon successful completion of this course, students will be able to: Use discrete and continuous probability distributions, including requirements, mean and variance, and making decisions

UNIT- I : Probability and Random Variables

Probability – Axioms – Combinatorics, Probability on finite sample spaces – Conditional probability and Baye’s theorem - Independence of events – Random variables – Probability distribution of a random variable – Discrete and continuous random variables – Function of a random variable. (Chapter 1: Sections 1.3 to 1.6 and Chapter 2: Sections 2.2 to 2.5)

UNIT- II: Moments and Generating Functions

Moments of a distribution function – Generating functions – Some moment inequalities. (Chapter 3: Sections 3.2 to 3.4)

UNIT-III : Multiple Random Variables

Multiple random variables – Independent random variables – Functions of several random variables.(Chapter 4: Sections 4.2 to 4.4)

UNIT-IV : Multiple Random Variables (Contd.)

Covariance, Correlation and moments – Conditional expectation – Some discrete distributions – Some continuous distributions. (Chapter 4: Sections 4.5 and 4.6 and Chapter 5: Sections 5.2 to 5.3)

UNIT-V: Limit Theorems

Modes of convergence – Weak law of large numbers – Strong law of large numbers – Central limit theorems.(Chapter 6: Sections 6.2 to 6.4 and 6.6)

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Use the basic probability rules, including additive and multiplicative laws, using the terms, independent and mutually exclusive events.

CLO2: Translate real-world problems into probability models.

CLO3: Derive the probability density function of transformation of random variables.

CLO4: Calculate probabilities, and derive the marginal and conditional distributions of bivariate random variables.

CLO5: Analyze statistical using Multiple Random Variables.

Program: M.Sc. Mathematics				
Elective-III		Course Code: 23PMA2E11		Course Title: Statistical Data Analysis Using R- Programming
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	3	100

Course Objectives

Introduce basic statistics for exploratory data analysis including methods for describing and summarizing variable distributions. Provide essential skills for data manipulation including selecting subsets and recoding. Introduce the visual representation of variables in scatter graphs, bar charts, and histograms.

UNIT- I : Introduction to R programming

What is R? - Installing R and R Studio – R Studio Overview - Working in the Console - Arithmetic Operators – Logical Operations - Using Functions - Getting Help in R and Quitting R Studio- Installing and loading packages. Data structures, variables, and data types in R: Creating Variables - Numeric, Character and Logical Data - Vectors - Data Frames - Factors -Sorting Numeric, Character, and Factor Vectors - Special Values.

UNIT- II: Data Visualization using R

Scatter Plots - Box Plots - ScatterPlots and Box- and-Whisker Plots Together -Customize plot axes, labels,add legends, and add colours.

UNIT-III : Descriptive statistics in R

Measures of central tendency -Measures of variability - Skewness and kurtosis - Summary functions, describe functions, and descriptive statistics by group.

UNIT-IV : Testing of Hypothesis using R

T-test, Paired Test, correlation, Chi Square test, Analysis of Variance and Correlation.

UNIT-V: Predictive Analytics

linear Regression model, Non-LinearLeast Square, multiple regression analysis, Logistic Regression, Panel Regression Analysis, ARCH Model, GARCH models, VIF model.

4. <https://www.geeksforgeeks.org/predictive-analysis-in-r>

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Explain critical R programming concepts.

CLO2: Demonstrate how to install and configure RStudio.

CLO3: Explain the use of data structure and loop functions.

CLO4: Analyse data and generate reports based on the data.

CLO5: Apply various concepts to write programs in R.

Program: M.Sc. Mathematics				
Elective - III		Course Code: 23PMA2E12		Course Title: Tensor Analysis And Relativity Theory
Semester	Hours/Week	Total Hours	Credits:	Total Marks
II	6	90	3	100

Course Objectives

The course aims to introduce vector algebra and vector calculus and special relativity and relativistic kinematics, dynamics and accelerated systems.

UNIT- I : TENSOR ALGEBRA

Systems of Different orders - Summation Convention - Kronecker Symbols - Transformation of coordinates in S_n - Invariants - Covariant and Contravariant vectors - Tensors of Second Order - Mixed Tensors - Zero Tensor - Tensor Field. Algebra of Tensors - Equality of Tensors - Symmetric and Skew – symmetric tensors - Outer multiplication, Contraction and Inner Multiplication - Quotient Law of Tensors - Reciprocal Tensor of Tensor Relative Tensor - Cross Product of Vectors. Chapter I : I.1 - I.3, I.7 and I.8 and Chapter II : II.1 - II.19.

UNIT- II: TENSOR CALCULUS

Riemannian Space - Christoffel Symbols and their properties, Chapter III: III.1 and III.2

UNIT-III : TENSOR CALCULUS (CONTD)

Covariant Differentiation of Tensors - Riemann - Christoffel Curvature Tensor - Intrinsic Differentiation. Chapter III: III.3 - III.5

UNIT-IV : SPECIAL THEORY OF RELATIVITY

Galilean Transformation - Maxwell's equations - The ether Theory - The Principle of Relativity. Relativistic Kinematics : Lorentz Transformation equations - Events and simultaneity - Example - Einstein Train - Time dilation - Longitudinal Contraction - Invariant Interval - Proper time and Proper distance - World line - Example - twin paradox - addition of velocities- Relativistic Doppler effect. Chapter 7 : Sections 7.1 and 7.2

UNIT-V: RELATIVISTIC DYNAMICS

Momentum - Energy - Momentum - energy four vector - Force - Conservation of Energy - Mass and energy - Example - inelastic collision - Principle of equivalence - Lagrangian and Hamiltonian formulations. Accelerated Systems : Rocket with constant acceleration - example - Rocket with constant thrust . Chapter 7 : Sections 7.3 and 7.4

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: The Relations between other papers of Mathematics.

CLO2: To Study and to learn the cause effect related to these.

CLO3: Visualization of the transformation of the mathematical quantities from one space to other and their expressions.

CLO4: The applications in observing and relating real situations/Structures.

CLO5: The use of tensor fields allows us to present physical laws in a clear, compact form.

Program: M.Sc. Mathematics				
Elective - IV		Course Code:23PMA2E13	Course Title: Wavelets	
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	3	100

Course Objectives

To establish the theory necessary to understand and use wavelets and related constructions.

UNIT-I: Signals and Systems

Basic concepts of signals and systems, Frequency spectrum of signals; Classification of signals: Discrete time signals and continuous time signals, periodic and non-periodic signals; Classification of systems: Linear, nonlinear, time-variant, time-invariant, stable and unstable systems.

UNIT-II: Haar Scaling Function and Wavelet

Time-Frequency Analysis Orthogonal functions, Orthonormal functions, Function spaces, Orthogonal basis functions, Haar scaling function, Haar spaces: Haar space, general Haar space V_\square ; Haar wavelet, Haar wavelet spaces: Haar wavelet space general Haar wavelet space ; Decomposition and reconstruction, Time-frequency analysis.

UNIT-III: Fourier Transforms and Wavelets

Orthogonal and orthonormal bases Discrete Fourier transform of a digital signal, Complex form of a Fourier series, Inverse discrete Fourier transform, Window Fourier transform, short time Fourier transform, Admissibility condition for a wavelet, Classes of wavelets: Haar, Morlet, Mexican hat, Meyer and Daubechies wavelets; Wavelets with compact support.

UNIT-IV: Discrete Wavelet Transforms

Stationary and non-stationary signals, Haar transform, 1-level Haar transform, Multi-level Haar Stationary and non-stationary signals, Haar transform, Conservation and compaction of energy, Multiresolution analysis, Decomposition and reconstruction of signals using discrete wavelet transform (DWT).

UNIT-V: Applications

Wavelet series expansion using Haar and other wavelets, Applications in signal compression, Analysis and classification of audio signals using DWT, Signal de-noising: Image and ECG signals

Text Book:

2. https://onlinecourses.nptel.ac.in/noc23_ee32/preview

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Know basic concepts of signals and systems.

CLO 2: Understand the concept of Haar spaces.

CLO 3: Learn Fourier transform and wavelet transform of digital signals.

CLO 4: Learn applications of wavelets to the real-world problems.

CLO 5: Apply wavelets in signal processing and image processing.

Program: M.Sc. Mathematics				
Elective - IV		Course Code:23PMA2E14		Course Title: Modeling And Simulation With Excel
Semester	Hours/Week	Total Hours	Credits	Total Marks
II	6	90	3	100

Course Objectives

The aim of the course is to elevate Excel models, to improve clarity, longevity, and transferability of these models, and to reduce mistakes and to encourage consistency in businesses as they work with Excel.

UNIT-I: Introduction- How Do We Classify Models? - An Example of Deterministic Modeling - Understanding the Important Elements of a Model.

UNIT-II: Model Building with Excel - Basic Model - Sensitivity Analysis -Controls from the Forms Control Tools- Scroll Bars .

UNIT-III: Modeling and Simulation: Types of Simulation and Uncertainty -Incorporating Uncertain Processes in Models -The Monte Carlo Sampling Methodology-Implementing Monte Carlo Simulation Methods-A Word About Probability Distributions -Modeling Arrivals with the Poisson Distribution-VLOOKUP and HLOOKUP Functions.

UNIT-IV: A Financial Example—Income Statement -An Operations Example—Autohaus -Status of Autohaus Model -Building the Brain Worksheet - Building the Calculation Worksheet-Variation in Approaches to Poisson Arrivals—Consideration of Modeling Accuracy.

UNIT-V: Sufficient Sample Size - Building the Data Collection Worksheet -Solver—Constrained Optimization -Example—York River Archaeology Budgeting –Scenarios.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Describe the role of important elements of discrete event simulation and modeling paradigm.

CLO 2: Conceptualize real world situations related to systems development decisions, originating
From source requirements and goals.

CLO 3: Develop skills to apply simulation software to construct and execute goal-driven system models.

CLO 4: Interpret the model and apply the results to resolve critical issues in a real world environment.

CLO 5: Learn applications of Simulation to the problems.

Program: M.Sc. Mathematics				
Elective-IV		Course Code:23PMA2E15		Course Title: Machine Learning and Artificial Intelligence
Semester	Hours/Week	Total Hours	Credits:	Total Marks
II	6	90	3	100

Course Objectives

- To Learn about Machine Intelligence and Machine Learning applications
- To implement and apply machine learning algorithms to real- world applications.
- To identify and apply the appropriate machine learning technique to classification, pattern recognition, optimization and decision problems.
- To understand how to perform evaluation of learning algorithms and model selection.
- To understand about the basic theory of problem solving paradigms and search strategies in artificial intelligence.
- To make the students familiar with knowledge representation, planning, learning, natural language processing and robotics

UNIT-I: INTRODUCTION:

Learning Problems – Perspectives and Issues – Concept Learning – Version Spaces and Candidate Eliminations – Inductive bias – Decision Tree learning –Representation – Algorithm – Heuristic Space Search.

UNIT-II: NEURAL NETWORKS AND GENETIC ALGORITHMS:

Neural Network Representation – Problems –Perceptrons – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms– Hypothesis Space Search – Genetic programming –Models of Evaluation and Learning.

UNIT-III: BAYESIAN AND COMPUTATIONAL LEARNING:

Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier –Bayesian Belief Network –EM Algorithm – Probability Learning – Sample Complexity –Finite and Infinite Hypothesis Spaces – Mistake Bound Model.

UNIT-IV: Introduction - Intelligent Agents- Problem Solving - by Searching - Informed Search Strategies-Optimization Problems - Adversarial Search-Knowledge and Reasoning - Logical Agents - First-Order Logic - Inference in First-Order Logic - Knowledge Representation.

UNIT-V: Planning – Planning and Acting in the Real World - Uncertain knowledge and reasoning - Uncertainty - Probabilistic Reasoning - Probabilistic Reasoning over Time - Making Simple Decisions - Making Complex Decisions.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

- CLO 1:** Have a good understanding of the fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.
- CLO 2:** Have an understanding of the strengths and weaknesses of many popular machine learning approaches.
- CLO 3:** Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and unsupervised learning.
- CLO 4:** Be able to design and implement various machine learning algorithms in a range of real-world applications.
- CLO 5:** Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.

Program: M.Sc. Mathematics				
Elective-IV		Course Code:23PMA2E16		Course Title: Neural Networks
Semester	Hours/Week	Total Hours	Credits:	Total Marks
II	6	90	3	100

Course Objectives

Enable students to understand important concepts and theories of artificial neural networks (ANNs), Enable students to understand how ANNs can be designed and trained Enable students to calculate simple examples of ANNs.

UNIT-I: Introductory Concepts: 'Neurons' and their basic function- Math review- Mathematical Machinery and Review- How and Why Perceptron's Can Compute Logic Statements- Training Perceptron's Using Supervised Learning Techniques- Training Multi-layer.

UNIT-II: Neural Networks Using Supervised Learning Techniques: Recurrent Neural Networks and Unsupervised Learning: Optimization Techniques- Implementation and Performance Considerations-Variations on the Hopfield Network-A Stochastic Version of the Hopfield Network:

UNIT-III: The Boltzmann Machine-A Stochastic Version of the Binary Associative Memory: Restricted Boltzmann Machines-Competitive Learning and Self-Organizing Maps-Neural Network Modifications and Applications- Cellular Neural Networks and the Future of Massively Parallel Computation.

UNIT-IV: Introduction to Machine Learning Techniques: Types of learning, hypothesis space and inductive bias, evaluation, cross-validation. Linear regression, Decision trees, overfitting.

UNIT-V: Support Vector Machine, Kernel function and Kernel SVM. Neural network: Perceptron, multilayer network, backpropagation, introduction to deep neural network.

Program: M.Sc. Mathematics				
Core - VII		Course Code:23PMA3C07	Course Title: Complex Analysis	
Semester	Hours/Week	Total Hours	Credits:	Total Marks
III	6	90	5	100

Course Objectives

To Study Cauchy integral formula, local properties of analytic functions, general form of Cauchy's theorem and evaluation of definite integral and harmonic functions

UNIT-I: Cauchy's Integral Formula: The Index of a point with respect to a closed curve – The Integral formula – Higher derivatives. Local Properties of analytical Functions Removable Singularities-Taylor's Theorem – Zeros and poles – The local Mapping – The Maximum Principle. Chapter 4 : Section 2 : 2.1 to 2.3, Chapter 4 : Section 3 : 3.1 to 3.4.

UNIT-II: The general form of Cauchy's Theorem : Chains and cycles- Simple Continuity - Homology - The General statement of Cauchy's Theorem - Proof of Cauchy's theorem - Locally exact differentials- Multiply connected regions - Residue theorem - The argument principle. Chapter 4 : Section 4 : 4.1 to 4.7, Chapter 4 : Section 5: 5.1 and 5.2

UNIT-III: Evaluation of Definite Integrals and Harmonic Functions Evaluation of definite integrals - Definition of Harmonic function and basic properties - Mean value property - Poisson formula. Chapter 4 : Section 5 : 5.3, Chapter 4 : Sections 6 : 6.1 to 6.3.

UNIT-IV: Harmonic Functions and Power Series Expansions: Schwarz theorem - The reflection principle - Weierstrass theorem – Taylor's Series – Laurent series. Chapter 4 : Sections 6.4 and 6.5, Chapter 5 : Sections 1.1 to 1.3.

UNIT-V: Partial Fractions and Entire Functions: Partial fractions - Infinite products – Canonical products – Gamma Function- Jensen's formula – Hadamard's Theorem. Chapter 5 : Sections 2.1 to 2.4, Chapter 5 : Sections 3.1 and 3.2.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Analyze and evaluate local properties of analytical functions and definite integrals.

CLO2: Describe the concept of definite integral and harmonic functions.

CLO3: Demonstrate the concept of the general form of Cauchy's theorem

CLO4: Develop Taylor and Laurent series .

CLO5 Explain the infinite products, canonical products and Jensen's formula .

Program: M.Sc. Mathematics				
Core - VIII		Course Code:23PMA3C08		Course Title: Probability Theory
Semester	Hours/Week	Total Hours	Credits:	Total Marks
III	6	90	5	100

Course Objectives

To introduce axiomatic approach to probability theory, to study some statistical characteristics, discrete and continuous distribution functions and their properties, characteristic function and basic limit theorems of probability.

UNIT-I : Random Events and Random Variables: Random events – Probability axioms – Combinatorial formulae – conditional probability – Bayes Theorem – Independent events – Random Variables – Distribution Function – Joint Distribution – Marginal Distribution – Conditional Distribution – Independent random variables – Functions of random variables.

Chapter 1: Sections 1.1 to 1.7, Chapter 2 : Sections 2.1 to 2.9.

UNIT-II : Parameters of the Distribution : Expectation- Moments – The Chebyshev Inequality – Absolute moments – Order parameters – Moments of random vectors – Regression of the first and second types. Chapter 3 : Sections 3.1 to 3.8.

UNIT-III: Characteristic functions : Properties of characteristic functions – Characteristic functions and moments – semi-invariants – characteristic function of the sum of the independent random variables – Determination of distribution function by the Characteristic function – Characteristic function of multidimensional random vectors – Probability generating functions.

UNIT-IV : Some Probability distributions: One point , two point , Binomial – Polya – Hypergeometric – Poisson (discrete) distributions – Uniform – normal gamma – Beta – Cauchy and Laplace (continuous) distributions. Chapter 5 : Section 5.1 to 5.10 (Omit Section 5.11).

UNIT-V: Limit Theorems : Stochastic convergence – Bernoulli law of large numbers – Convergence of sequence of distribution functions – Levy-Cramer Theorems – de Moivre-Laplace Theorem – Poisson, Chebyshev, Khintchine Weak law of large numbers – Lindberg Theorem – Lapunov Theorem – Borel-Cantelli Lemma - Kolmogorov Inequality and Kolmogorov Strong Law of large numbers. Chapter 6 : Sections 6.1 to 6.4, 6.6 to 6.9 , 6.11 and 6.12. (Omit Sections 6.5, 6.10,6.13 to 6.15).

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: To define Random Events, Random Variables, to describe Probability, to apply Bayes, to define Distribution Function, to find Joint Distribution function, to find Marginal Distribution and Conditional Distribution function, to solve functions on random variables.

CLO2: To define Expectation, Moments and Chebyshev Inequality, to solve Regression of the first and second types.

CLO3: To define Characteristic functions, to define distribution function, to find probability generating functions, to solve problems applying characteristic functions

CLO4: To define One point, two-point, Binomial distributions, to solve problems of Hypergeometric and Poisson distributions, to define Uniform, normal, gamma, Beta distributions, to solve problems on Cauchy and Laplace distributions

CLO5: To discuss Stochastic convergence, Bernaulli law of large numbers, to elaborate Convergence of sequence of distribution functions, to prove Levy-Cramer Theorems and de Moivre-Laplace Theorems, to explain Poisson, Chebyshev, Khintchine Weak law of large numbers, to explain and solve problems on Kolmogorov Inequality and Kolmogorov Strong Law of large numbers.

Program: M.Sc. Mathematics				
Core - IX		Course Code:23PMA3C09	Course Title: Topology	
Semester	Hours/Week	Total Hours	Credits	Total Marks
III	6	90	5	100

Course Objectives

To study topological spaces, continuous functions, connectedness, compactness, countability and separation axioms.

UNIT-I : Topological spaces : Topological spaces – Basis for a topology – The order topology – The product topology on $X \times Y$ – The subspace topology – Closed sets and limit points. Chapter 2 : Sections 12 to 17.

UNIT-II :Continuous functions: Continuous functions – the product topology – The metric topology. Chapter 2 : Sections 18 to 21 (Omit Section 22).

UNIT-III :Connectedness: Connected spaces- connected subspaces of the Real line – Components and local connectedness. Chapter 3 : Sections 23 to 25.

UNIT-IV : Compactness : Compact spaces – compact subspaces of the Real line – Limit Point Compactness – Local Compactness. Chapter 3 : Sections 26 to 29.

UNIT-V: Countability and Separation Axiom: The Countability Axioms – The separation Axioms – Normal spaces – The Urysohn Lemma – The Urysohn metrization Theorem – The Tietz extension theorem. Chapter 4 : Sections 30 to 35.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Define and illustrate the concept of topological spaces and the basic definitions of open sets, neighbourhood, interior, exterior, closure and their axioms for defining topological space.

CLO2: Understand continuity, compactness, connectedness, homeomorphism and topological properties.

CLO3: Analyze and apply the topological concepts in Functional Analysis.

CLO4: Ability to determine that a given point in a topological space is either a limit point or not for a given subset of a topological space.

CLO5: Develop qualitative tools to characterize connectedness, compactness, second countable, Hausdorff and develop tools to identify when two are equivalent(homeomorphic).

Elective V to be chosen from **Group E**:

Program: M.Sc. Mathematics				
Elective – V (From Group – E)		Course Code:23PMA3E17		Course Title: Algebraic Number Theory
Semester	Hours/Week	Total Hours	Credits	Total Marks
III	6	90	3	100

Course Objectives

The course aims to provide a study on modules over rings, finite fields, algebraic extensions, number fields and cyclotomic fields, Noetherian rings and modules and Dedekind rings.

UNIT-I: Algebraic Background

Rings and Fields- Factorization of Polynomials - Field Extensions - Symmetric Polynomials - Modules - Free Abelian Groups. Chapter 1: Sec. 1.1 to 1.6

UNIT-II: Algebraic Numbers

Algebraic numbers - Conjugates and Discriminants - Algebraic Integers - Integral Bases - Norms and Traces - Rings of Integers. Chapters 2: Sec. 2.1 to 2.6

UNIT-III: Quadratic And Cyclotomic Fields

Quadratic fields and cyclotomic fields : Factorization into Irreducibles : Trivial factorization - Factorization into irreducibles - Examples of non-unique factorization into irreducibles. Chapter 3: Sec. 3.1 and 3.2 ; Chapter 4: Sec. 4.2 to 4.4

UNIT-IV: Prime Factorization

Euclidean Domains - Euclidean Quadratic fields - Consequences of unique factorization - The Ramanujan -Nagell Theorem. Chapter 4: Sec. 4.5 to 4.9.

UNIT-V: Ideals

Prime Factorization of Ideals - The norms of an Ideal - Non-unique Factorization in Cyclotomic Fields. Chapter 5 : Sec. 5.2 to 5.4

<http://www.opensource.org>, www.mathpages.com

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: The concept (definition and significance) of algebraic numbers and algebraic integers.

CLO2: How to factorise an algebraic integer into irreducibles.

CLO3: How to find the ideals of an algebraic number ring.

CLO4: The definition of the Class Group.

CLO5: The definition of an Ideals.

Program: M.Sc. Mathematics				
Elective – V (From Group – E)		Course Code: 23PMA3E18		Course Title: Fluid Dynamics
Semester	Hours/Week	Total Hours	Credits	Total Marks
III	6	90	3	100

Course Objectives

Understand the various properties of fluids and their influence on fluid motion and analyse a variety of problems in fluid statics and dynamics. Calculate the forces that act on submerged planes and curves.

UNIT- I : Kinematics of Fluids in Motion

Real fluids and Ideal fluids - Velocity of a fluid at a point –Stream lines and path lines - Steady and Unsteady flows - The Velocity Potential - The Vorticity Vector - Local and Particle Rates of Change - The Equation of Continuity - Worked Examples. (Chapter 2: Sections 2.1 - 2.8).

UNIT- II: Equations of Motion of a Fluid

Pressure at a point in a fluid at rest - Pressure at a point in a moving fluid - Euler's equations of Motion - Bernoulli's equation -Worked Examples - Discussion of the case of steady motion under Conservative Body Forces - Some flows involving axial symmetry(examples 1 and 2 only). (Chapters 3: Sections 3.1, 3.2,3.4 - 3.7, 3.9).

UNIT-III: Some Three-Dimensional Flows

Introduction - Sources, Sinks and Doublets-Images in rigid infinite plane - Images in solid spheres – Axis symmetric flows. (Chapter 4: Sections 4.1 - 4.4).

UNIT-IV: Some Two-Dimensional Flows

The Stream Function - The Complex Velocity Potential for Two Dimensional Irrotational, Incompressible Flow - Complex Velocity Potentials for Standard TwoDimensional Flows - Some Worked Examples - Two Dimensional Image Systems - The Milne-Thomson Circle Theorem. (Chapter 5: Sections 5.3 - 5.8).

UNIT-V: Viscous Fluid

Stress components in a real fluid - Relation between Cartesian Components of Stress - Translational motion of fluid element – The Coefficient of Viscosity and Laminar flow - The Navier- Stokes equation of a viscous fluid - Some solvable problems in viscous flow – Steady motion between parallel planes only. (Chapter 8:Sections 8.1 - 8.3, 8.8, 8.9 and 8.10.1).

<http://www.opensource.org>, www.mathpages.com.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Calculate the forces that act on submerged planes and curves.

CLO2: Identify and analyse various types of fluid flows.

CLO3: Apply the integral forms of the three fundamental laws of fluid mechanics.

CLO4: Turbulent and laminar flow through pipes.

CLO5: Ducts in order to predict relevant pressures, velocities and forces.

Program: M.Sc. Mathematics				
Elective – V (From Group – E)		Course Code:23PMA3E19		Course Title: Stochastic Processes
Semester III	Hours/Week 6	Total Hours 90	Credits 3	Total Marks 100

Course Objectives

Carry out derivations involving conditional probability distributions and conditional expectations. Define basic concepts from the theory of Markov chains and present proofs for the most important theorems.

UNIT- I :

Introduction to stochastic process (SP) – classification of SP according to state space and time domain. countable state markov chain (MC). Chapman- Kolmogorov equations. Calculation of 'n' step transition probability.

UNIT- II:

Discrete state space – continuous time MC. Kolmogorov differential. Poisson process, birth and death process. Application to equations queues and storage problem. Random walk.

UNIT-III:

Markov process – continuous time and continuous state space - time homogenous markov process – Kolmogorov's equation. Wiener process as a limit of random walk, first passage time Diffusion process with Wiener process.

UNIT-IV:

Stationary process and time series- wide sense and strict sense stationary process – moving average and auto regressive process. Covariance function - Bochner's function (statement), Khintchine's representation of wide sense stationary process.

UNIT-V:

Renewal theory – renewal function and its properties –Elementary and key renewal theorems.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Apply the fundamentals of probability theory and random processes to practical engineering problems.

CLO2: Identify and interpret the key parameters that underlie the random nature of the problems.

CLO3: Use the top-down approach to translate engineering system requirements into practical design problems.

CLO4: Compute probabilities of transition between states and return to the initial state after long time intervals in Markov chains.

CLO5: Identify classes of states in Markov chains and characterize the classes. Determine limit probabilities in Markov chains after an infinitely long period.

Program: M.Sc. Mathematics				
Elective – V (From Group – E)		Course Code:23PMA3E20		Course Title: Mathematical Python
Semester	Hours/Week	Total Hours	Credits	Total Marks
III	6	90	3	100

Course objectives

This course aims

- To introduce to students Python programming.
- To learn python coding to implement algorithms for Mathematical problems.

UNIT- I: Introduction to Python

Basic syntax, variable types, basic operators, numbers, strings, lists, tuples, functions and input/output statements. Some simple programs to understand the relational, conditional and logical operators. Compare two numbers (less than, greater than) using if statement. Sum of natural numbers using while loop; Finding the factors of a number using for loop; To check the given number is prime or not (use if... else statement); Find the factorial of a number (use if...if...else); Simple programs to illustrate logical operators (and, or, not).

UNIT- II: Matrices, Differential Calculus & Analytical Geometry of Three Dimensions

Python commands to reduce given matrix to echelon form and normal form with examples. Python program/command to establish the consistency or otherwise and solving system of linear equations. Python command to find the nth derivatives. Python program to find nth derivative with and without Leibnitz rule. Obtaining partial derivative of some standard functions Verification of Euler's theorem, its extension and Jacobean. Python program for reduction formula with or without limits. Python program to find equation and plot sphere, cone, cylinder.

UNIT-III: Roots of High-Degree Equations- Systems of Linear Equations

Introduction, Simple Iterations Method - Finite Differences Method, Gauss Elimination Method: Algorithm, Gauss Elimination Method, Jacobi's Method, Gauss-Seidel's Method.

UNIT-IV: Numerical differentiation, Integration and Ordinary Differential Equations

Introduction & Euler's Method, Second Order Runge-Kutta's Method, Fourth Order Runge-Kutta's Method, Fourth Order Runge-Kutta's Method: Plot Numerical and Exact Solutions.

UNIT-V: Two-Point Boundary Value Problems Introduction to two- point boundary value Problems:

second order differential equations -Higher order differential equations - solution of second order differential equation using Finite Difference Method.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Create your first program in Python IDLE.

CLO2: Implement OOPs concepts in your programming.

CLO3: Use Arrays, and Data structures.

CLO4: Create an application with the support of graphics in Python.

CLO5: Implement error handling.

Program: M.Sc. Mathematics				
Core-XI		Course Code:23PMA4C11	Course Title: Functional Analysis	
Semester	Hours/Week	Total Hours	Credits	Total Marks
IV	6	90	5	100

Course Objectives

To provide students with a strong foundation in functional analysis, focusing on spaces, operators and fundamental theorems. To develop student's skills and confidence in mathematical analysis and proof techniques.

UNIT- I :

Banach Spaces: The definition and some examples – Continuous linear transformations – The Hahn-Banach theorem – The natural imbedding of N in N^{**} - The open mapping theorem – The conjugate of an Operator. Chapter 9:Sections 46-51.

UNIT- II:

Hilbert Spaces: The definition and some simple properties–Orthogonal complements–Ortho normal sets–The conjugate space H^* –The adjoint of an operator–self-adjoint operators–Normal and unitary operators – Projections. Chapter10:Sections52-59

UNIT-III:

Finite-Dimensional Spectral Theory: Matrices – Determinants and the spectrum of an operator – The spectral theorem. Chapter 11:Sections 60-62.

UNIT-IV:

General Preliminaries on Banach Algebras: The definition and some examples – Regular and singular elements – Topological divisors of zero – The spectrum – The formula for the spectral radius– The radical and semi-simplicity. Chapter 12:Sections 64-69.

UNIT-V:

The Structure of Commutative Banach Algebras: The Gelfand mapping – Application of the formula $r(x) = \lim \|x^n\|^{1/n}$ – Involutions in Banach algebras–The Gelfand-Neumark theorem. Chapter 13:Sections 70-73.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Understand the Banach spaces and Transformations on Banach Spaces.

CLO2: Prove Hahn Banach theorem and open mapping theorem.

CLO3: Describe operators and fundamental theorems.

CLO4: Validate orthogonal and orthonormal sets.

CLO5: Analyze and establish the regular and singular elements.

Low:1

Program: M.Sc. Mathematics				
Core-XII		Course Code:23PMA4C12		Course Title: Differential Geometry
Semester IV	Hours/Week 6	Total Hours 90	Credits 5	Total Marks 100

Course Objectives

This course introduces space curves and their intrinsic properties of a surface and geodesics. Further the non-intrinsic properties of surface and the differential geometry of surfaces are explored.

UNIT-I : Space curves: Definition of a space curve – Arc length – tangent – normal and binormal – curvature and torsion – contact between curves and surfaces- tangent surface- involutes and evolutes- Intrinsic equations – Fundamental Existence Theorem for space curves- Helices. Chapter I : Sections 1 to 9.

UNIT-II :Intrinsic properties of a surface: Definition of a surface – curves on a surface – Surface of revolution – Helicoids – Metric- Direction coefficients – families of curves- Isometric correspondence- Intrinsic properties. Chapter II: Sections 1 to 9.

UNIT-III : Geodesics: Geodesics – Canonical geodesic equations – Normal property of geodesics- Existence Theorems – Geodesic parallels – Geodesics curvature- Gauss- Bonnet Theorem – Gaussian curvature-surface of constant curvature. Chapter II: Sections 10 to 18.

UNIT-IV : Non Intrinsic properties of a surface: The second fundamental form- Principle curvature – Lines of curvature – Developable - Developable associated with space curves and with curves on surface - Minimal surfaces – Ruled surfaces. Chapter III: Sections 1 to 8.

UNIT-V :Differential Geometry of Surfaces :

Compact surfaces whose points are umbilics- Hilbert's lemma – Compact surface of constant curvature – Complete surface and their characterization – Hilbert's Theorem – Conjugate points on geodesics. Chapter IV : Sections 1 to 8 (Omit 9 to 15).

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: Explain space curves, Curves between surfaces, metrics on a surface, fundamentalform of a surface and Geodesics.

CLO2: Evaluate these concepts with related examples.

CLO3: Compose problems on geodesics.

CLO4: Recognize applicability of developable.

CLO5: Construct and analyze the problems on curvature and minimal surfaces.

Elective VI to be chosen from **Group F**:

Program: M.Sc. Mathematics				
Elective-VI (Chosen from Group F)		Course Code:23PMA4E21		Course Title: Algebraic Geometry
Semester	Hours/Week	Total Hours	Credits	Total Marks
IV	6	90	3	100

Course Objectives

The course aims at giving an introduction to classical algebraic geometry, that is, the theory of algebraic varieties, and the most important notions and techniques to study these.

UNIT-I: Affine algebraic sets

Affine spaces and algebraic sets, Noetherian rings, Hilbert basis theorem, affine algebraic sets as finite intersection of hypersurfaces; Ideal of a set of points, coordinate ring, morphism between algebraic sets, isomorphism. Integral extensions, Noether's normalization lemma

UNIT-II: Hilbert's Nullstellensatz and applications

Correspondence between radical ideals and algebraic sets, prime ideals and irreducible algebraic sets, maximal ideals and points, contrapositive equivalence between affine algebras with algebra homomorphisms and algebraic sets with morphisms, between affine domains and irreducible algebraic sets, decomposition of an algebraic set into irreducible components. Zariski topology on affine spaces, algebraic subsets of the plane.

UNIT-III: Projective spaces

Homogeneous coordinates, hyperplane at infinity, projective algebraic sets, homogeneous ideals and projective Nullstellensatz; Zariski topology on projective spaces. Twisted cubic in $P_3(k)$. Local properties of plane curves: multiple points and tangent lines, multiplicity and local rings, intersection numbers; projective plane curves: Linear systems of curves, intersections of projective curves: Bezout's theorem and applications; group structure on a cubic.

UNIT-IV: Introduction to sheaves of affine varieties

Examples of presheaves and sheaves, stalks, sheafification of a presheaf, sections, structure sheaf, generic stalk and function fields, rational functions and local rings, Affine tangent spaces; Projective varieties and morphisms; Hausdorff axiom.

UNIT-V: Prime spectrum of a ring

Zariski topology, structure sheaf, affine schemes, morphism of affine schemes. Elementary Dimension Theory, Fibres of a morphism, complete varieties, nonsingularity and regular local rings, Jacobian criterion, nonsingular curves and DVR's.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: An understanding of the concepts of affine and projective varieties.

CLO2: An understanding of schemes.

CLO3: The ability to calculate invariants of varieties.

CLO4: The ability to solve problems involving varieties by converting them into problems in algebra.

CLO5: The ability to pursue further studies in this and related areas.

Program: M.Sc. Mathematics				
Elective-VI		Course Code:23PMA4E22	Course Title: Financial Mathematics	
Semester	Hours/Week	Total Hours	Credits	Total Marks
IV	6	90	3	100

Course Objectives

- In this course, the students are on posed to The basic concepts of Probability theory, The Central limit theorem.
- The concepts of Geometric Brownian motion, Option pricing.
- The derivatives of Blackschole formula and its applications.
- The concept of call option on Dividend paying securities, estimating the volatility parameter.
- The limitations of Arbitrage pricing, the portfolio selection problem.

UNIT-I: Stochastic Order Relations

First-Order Stochastic Dominance -Using Coupling to Show Stochastic Dominance - Likelihood Ratio Ordering -A Single-Period Investment Problem-Second-Order Dominance.

UNIT-II: Optimization Models

Introduction- A Deterministic Optimization Model -Probabilistic Optimization Problems.

UNIT-III: Stochastic Dynamic Programming

The Stochastic Dynamic Programming Problem - Infinite Time Models - Optimal Stopping Problems.

UNIT-IV: Exotic Options

Introduction -Barrier Options - Asian and Lookback Options - Monte Carlo Simulation -Pricing Exotic Options by Simulation - More Efficient Simulation Estimators.

UNIT-V: Beyond Geometric Brownian Motion Models

Introduction -Crude Oil Data - Models for the Crude Oil Data - Final Comments.

Elective-VI		Course Code:23PMA4E23		Course Title: Resource Management Techniques
Semester	Hours/Week	Total Hours	Credits	Total Marks
IV	6	90	3	100

Course Objectives

The main aim of HRM is to ensure the right people with the right skills for the right job position in an organization. The main functions of HRM consist of recruiting, training, performance appraisal, motivating employees, ensuring their good health and safety, managing workplace communication, and so on.,

UNIT-I: Linear Programming

Principal components of decision problem – Modeling phases – LP Formulation and graphic solution –Resource allocation problems –Simplex method – Sensitivity analysis.

UNIT-II: Duality And Networks

Definition of dual problem – Primal – Dual relation ships – Dualsimplex methods – Post optimality analysis – Transportation and assignment model - Shortest route problem.

UNIT-III: Integer Programming

Cutting plan algorithm – Branch and bound methods, Multistage(Dynamic) programming.

UNIT-IV: Classical Optimisation Theory

Unconstrained external problems, Newton – Ralphson method –Equality constraints – Jacobean methods – Lagrangian method – Kuhn – Tucker conditions – Simple problems.

UNIT-V: Object Scheduling

Network diagram representation – Critical path method – Time charts and resource leveling – PERT.

SKILL ENHANCEMENT COURSES

Skill Enhancement Courses are chosen so as to keep in pace with the latest developments in the academic / industrial front and provides flexibility of choice by the stakeholders / institutions.

Group G (Skill Enhancement Courses) SEC

Program: M.Sc. Mathematics				
SEC	Course Code:23PMASEC01		Course Title: Mathematical Computation With Sagemath	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100

Course Objectives

Computational Mathematics with SageMath: This twelve week course aims to use SageMath, a Python based free and open source computer algebra system (CAS) to explore concepts in Calculus, Applied Linear Algebra, Numerical Methods and basic Linear Programming Problems.

UNIT-I: First Steps

The Sage Program -Sage as a Calculator.

UNIT-II: Analysis and Algebra

Symbolic Expressions and Simplification – Equations – Analysis -Basic Linear Algebra.

UNIT-III: Programming and Data Structures

Syntax –Algorithmics -Lists and Other Data Structures.

UNIT-IV: Graphics

2D Graphics - 3D Curves

UNIT-V: Computational Domains

Sage is Object-Oriented- Elements, Parents, Categories-Domainswith a Normal Form-Expressions vs Computational Domains.

Text Book:

Mathematical Computation with SageMath ,Paul ZimmermannAlexandre Casamayou.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO1: A browser-based notebook for review and Re-use of previous inputs and outputs, including graphics and text annotations.

CLO2: Demonstrate the concept of duality to solve Shortest route problem.

CLO3: A text-based command-line interface using IPython.

CLO4: Support for parallel processing using multi-core processors, multiple processors, or distributed computing.

CLO5: Demonstrate the types of constraints and optimization methods.

Program: M.Sc. Mathematics				
SEC	Course Code:23PMASEC02		Course Title: Advanced LATEX	
Semester	Hours/Week	Total Hours	Credits	Total Marks
	6	30	2	100

Course Objectives

The course aims

- To create understanding of the LaTeX.
- To typeset typical mathematical papers using the article style and figure out LaTeX errors, download and use packages, create simple diagrams.
- To prepare a short presentation using the beamer class.

UNIT-I: Introduction and the Structure of a LaTeX Document

Installation of the software LaTeX - Environments and commands - Classes and packages – Errors - Files created - How to use LaTeX at CUED - Document Classes - Arara- Counters and Length parameters - Document and page organization – Page breaks, footnotes. Environments , Matrix-like environments . Chapter - 1 and 2 in I & Chapter - 1 in II ; Chapter – 4 in I & Chapter – 5 in II; Chapter -8 (Section 8.3) in III.

UNIT-II: Display and alignment structures

Display and alignment structures for equations Comparison with standard LaTeX - A single equation on one line - A single equation on several lines: no alignment - A Single equation on several lines: with alignment - Equation groups without alignment - Equation groups with simple alignment- Multiple alignments: align and flalign - Display environments as mini-pages- Interrupting displays, Variable symbol commands - Symbols in formulas Chapter – 8 (Section 8.2, 8.5, 8.6 and 8.9) in III.

UNIT-III: Figures Directly in LaTeX

Inserting Images, Positioning Images, List of Figures, Drawing diagrams directly in LaTeX, TikZ package, Graphics and PSTricks Pictures and graphics in LaTeX, simple pictures using PSTricks, Plotting of functions.

UNIT-IV: Presentations (The beamer Class)

Overlays -Themes Assignments and Examinations The exam Class - The exsheets Package - The probsoln Package - Using the data tool Package for Exams or Assignment Sheets - Random Numbers. Charts Flow Charts - Pie Charts - The datapie Package - The pgf-pie Package - Bar Charts - The bchart Package - The databar Package - Gantt Charts - Plots . Chapter – 8, 9 and 12 in II .

UNIT-V: Structuring Your Document

Author and Title Information, Abstract, Chapters, Sections, Subsections, Creating a Table of Contents, Cross-Referencing, Creating a Bibliography, Page Styles and Page Numbering, Multi- Lingual Support: using the babel package. (5.1-5.7)

SEC		Course Code:23PMASEC06		Course Title: Industrial Mathematics using Latest Programming packages	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

Applied and Industrial Mathematics aims to solve real-world problems in Science, Engineering, Medicine, and Finance. It enhances your critical thinking skills and is integral to every scientific endeavour. Applied and Industrial Mathematics is fundamental to problem-solving.

UNIT-I:

Mathematics in industry- Overview of the case studies-Units and dimensions
- Diffusion equations - Heat conduction equations

UNIT-II:

Boundary conditions -Solving the heat/diffusion equation -Scalingequations - Dimensional analysis

UNIT-III:

Continuous Casting - Introduction to the case study problem - The Boltzmann similarity solution- A moving boundary problem - The pseudo- steady-state approximate solution-Solving the continuous casting case study

UNIT-IV:

Water Filtration - Introduction to the case study problem -Stretching transformations - Diffusion from a point source -Solving the waterfiltration case study

UNIT-V:

Laser Drilling -Introduction to the case study problem - Method of perturbations -Boundary perturbations - Solving the laser drilling casestudy.

Text Book:

Industrial Mathematics Case Studies in the Diffusion of Heat and Matter, GLENN R. FULFORD
PHILIP BROADBRIDGE.

Website and e-Learning Source:

<http://www.opensource.org>, www.mathpages.com

Learning Outcomes:

Students will be able to

CLO1: Develop own methods of performing operations on numbers in daily life (addition, subtraction, multiplication and division).

CLO2: Develop language and symbolic notations with standard algorithms of performing number operations.

CLO3: Estimate outcome of operations on two or more numbers and use it in daily life activities.

CLO4: The course is designed to prepare students to undertake careers involving problem solving in mathematics using computer science and technologies.

CLO5: To pursue advanced studies and research in mathematics using computer science.

SEC		Course Code:23PMASEC07		Course Title: Research Tools And Techniques	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

This course addresses the issues inherent in selecting a research problem and discuss the techniques and tools to be employed in completing a research project. This will also enable the students to prepare report writing and framing Research proposals.

UNIT-I:

Research Process- Research Design

UNIT-II:

Research Problem-Variables and Their Types

UNI- III:

Formulation of Hypothesis– Sampling- Tools of Data Collection

UNIT-IV:

Data Analysis- Interpretation of Data

UNIT-V:

Research Methods - Descriptive or Survey Method - Experimental Method

Text Book:

RESEARCH METHODOLOGY: TOOLS AND TECHNIQUES Dr. Prabhat Pandey Dr. Meenu Mishra Pandey © Bridge Center, 2015.

Learning Outcomes:

Students will be able to

CLO1: Demonstrate the ability to choose methods appropriate to research aims and objectives.

CLO2: Understand the limitations of particular research methods.

CLO3: Develop skills in qualitative and quantitative data analysis and presentation.

CLO4: Develop advanced critical thinking skills.

CLO5: To pursue advanced studies and research in mathematics using computer science.

**EXTRA DISCIPLINARY COURSES FOR OTHER DEPARTMENTS
(NOT FOR MATHEMATICS STUDENTS)**

Students from other Departments may also choose any one of the following as ExtraDisciplinary Course.

ED-I		Course Code:23PMAED01		Course Title: Mathematics For Life Sciences	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

1. The focus of the course is on scientific study of normal functions in living systems. The emphasis is on exposure to nonlinear differentialequations with examples such as heartbeat, chemical reactions and nerve impulse transmission.
2. The basic concepts of the probability to understand molecular evolution and genetics have also been applied.

UNIT-I: Cell Growth-Exponential growth and Decay – Determination of growth or decay rates- The method of least squares – Nutrient Uptake by a cell –Inhomogeneous Differential equations.

UNIT-II: Growth of a Microbial colony – Growth in a Chemo stat – Interacting Populations – Mutation and Reversion in Bacterial growth.

UNIT-III: Enzyme Kinematics: The Michaelis – Menton Theory – Enzyme Substrate – Inhibitor system – Cooperative dimmer – Allosteric enzymes – Other alloseteric theories.

UNIT-IV: The Cooperative dimmer – Allosteric enzymes – Other alloseterictheories.

UNIT-V: Hemoglobin – Graph theory and Steady state Enzyme Kinetics –Enzyme – Substrate – Modifier system – Enzyme Substrate – Activator system.

Text Book:

S. I. Rubinow, Introduction Mathematical Biology, Dover publications, NewYork, 1975. Chapter I and Chapter 2 (Sections 2.1,2.3, to 2.11).

<http://www.opensource.org>, www.mathpages.com

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: analysis and interpretation of bio mathematical models such as Population growth, celldivision, and predator-prey models.

CLO 2: apply the basic concepts of probability to molecular evolution and genetics.

CLO 3: Identify and appreciate the unifying influence of mathematical modelling in different disciplines

CLO 4: Explain Allosteric enzymes

CLO 5: Analyze and translate a real-world problem into a mathematical problem

Medium:2

Low:1

ED-II		Course Code:23PMAED02		Course Title: Mathematics For Social Sciences	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

Provide students with mathematical foundations to understand advanced statistical methods. Cover key mathematical principles in an applied context, using social science examples and real data.

UNIT-I: Propositional Logic and set Theory

Propositional Logic Propositional Logic -Open propositions and quantifiers -Arguments and Validity - Set Theory

UNIT-II: Functions

The real number system - Solving equations and inequalities; linear and quadratic equations - Review of relations and functions

UNIT-III:

Real valued functions and their properties -Types of functions and inverse of a function - Polynomials, zeros of polynomials, rational functions and their graphs

UNIT-IV:

Definition and basic properties of logarithmic, exponential, trigonometric functions and their graph

UNIT-V: Matrices and determinant

Definition of a matrix -Matrix Algebra -Types of matrices -Elementary row operations - Row echelon form and reduced row echelon form of a matrix

Text Book:

Mathematics for Social Sciences , Dr. Berhanu Bekele, Ato Mulugeta Naizghi

Website and e-Learning Source:

<http://mathforum.org>, <http://ocw.mit.edu/ocwweb/Mathematics>,
<http://www.opensource.org>, www.mathpages.com

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Provide students with mathematical foundations to understand advanced statistical methods

CLO 2: Cover key mathematical principles in an applied context, using social science examples and real data

CLO 3: Understand the mathematics behind least squares estimation; principal components; and

logistic regression.

CLO 4: Understand how establishing statistical certainty relies on differential and integral Calculus.

CLO 5: To engage critically with the challenges in capturing and understanding the world with quantitative methods.

ED-III		Course Code:23PMAED03		Course Title: Statistics For Life And Social Sciences	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

The main objective of this course is to introduce students the knowledge of real field and its properties. It will provide grounds for Probability Theory and help them in theoretical and applied researches in Statistics.

UNIT-I:

Definitions, and Scope of Statistics -Approach to Data Collection -Introduction to Set Theory I & II -Concepts of Logic.

UNIT-II:

Diagrammatic Presentation of Data -Frequency Distribution - Graphical Presentation of Data - Measures of Central Tendency.

UNIT-III:

Probability Theory I&II - Permutation Theorem -Combination -Binominal Distribution.

UNIT-IV:

Nature and Importance of Statistical Inquiries - Basic ResearchMethodology I & II

UNIT-V:

Nature of Science -Some Basic Concepts in Social Statistics

Text Book:

BASIC STATISTICS FOR SOCIAL SCIENCES ,Dr. Henry Obasogie (Course Reviewer) – Benson Idahosa University Dr. Moses Etila Shaibu (CourseEditor) – NOUN

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Recognise which analysis procedure is appropriate for a given research problem involving one or two variables

CLO 2: Understand principles of study design

CLO 3: Apply probability theory to practical problems

CLO 4: Apply statistical procedures on a computer using Microsoft Excel and/or R

CLO 5: Interpret computer output for a statistical procedure

ED-IV		Course Code:23PMAED04		Course Title: Game Theory and Strategy	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

1. It focuses on fundamentals of game theory including basic concepts and techniques, various ways of describing and solving games, and various applications in economics, political sciences, and business.
2. It will help students sharpen their understanding of strategic behavior in different situations involving many individuals. T
3. The students will learn how to recognize and model strategic situations, to predict when and how their action will have an influence on others, and to exploit strategic situations for the benefit of their own.

UNIT-I:

Game, Strategy and Saddle Point: Introduction- Description of a game of strategy- Relations among expectations- Saddle points-Game with perfect information's. Chapter 1.

UNIT-II:

The Fundamentals: Game without saddle points-mixed strategies- Graphical representation of mixed strategies – the minimax theorem – optimal mixed strategy – graphical representation of minimax theorem and proof of minimax theorem. Chapter 2.

UNIT-III:

Properties of Optimal Strategies: Many optimal strategies – some properties of an optimal strategies – convex set of optimal strategies- operation on games – dominated strategies – all strategies active. Chapter 3 (Section 3.1 to 3.6).

UNIT-IV:

Method of Solving games: Solving for optimal strategies – Guess and verify – Examination of submatrices – Successive approximations –Graphical solutions of 3 x 3 games. Chapter 5 (Section 5.1 to 5.5)

UNIT-V:

Mapping method for solving games with constraints – Mapping method for solving games – solution of reconnaissance game by mapping method. Chapter 5 (Section 5.6 to 5.8).

2. <https://archive.nptel.ac.in/courses/110/104/110104063/>

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Distinguish a game situation from a pure individual’s decision problem.

CLO 2: Explain graphical representation of mixed strategies.

CLO 3: Explain concepts of dominant, dominated, and rationalizable strategies, pure and mixed strategies, and best responses.

CLO 4: Analyse economic situations using game theoretic techniques.

CLO 5: Solve simple games using mapping method.

ED-V		Course Code:23PMAED05		Course Title: History Of Mathematics	
Semester	Hours/Week 6	Total Hours 30	Credits 2	Total Marks 100	

Course Objectives

The objectives (and outcomes) for math history courses also include clear, critical, creative, and flexible thinking, and an appreciation for the beauty and joy of mathematics. It is important for students to develop an understanding of mathematics both as a science and as an art.

UNIT-I:

Early Number Systems and Symbols

UNIT-II:

Mathematics in Early Civilizations

UNIT-III:

The Beginnings of Greek Mathematics

UNIT-IV:

The Alexandrian School: Euclid

UNIT-V:

The Twilight of Greek Mathematics: Diophantus

Text Book:

The History of Mathematics , Seventh Edition David M. Burton University of New Hampshire.

NME-I		Course Code:23PMANME01		Course Title: Operations Research For Management	
Semester II	Hours/Week 3	Total Hours 45	Credits 2	Total Marks 100	

Course Objectives

This course introduces advanced topics in Linear and non-linear Programming

UNIT-I:

Decision Analysis-Decision making problem – Decision making process – Decision making Environment – Decision under uncertainty – Decision under Risk – Decision – Tree Analysis.

UNIT-II:

Games Theory-Two person zero-Sum Games – The maximin – Minimax Principle-Games without saddle points - Graphic solution of $2 \times n$ and $m \times 2$ Games.

UNIT-III:

Mixed Strategy Games-Dominance property - Arithmetic method for $n \times n$ games – General solution of $m \times n$ Rectangular Games using linear programming.

UNIT-IV:

Dynamic Programming – Product Allocation Problem – Cargo – Loading Model – workforce size model.

UNIT-V:

Sequencing problem – processing n jobs through Two machines – processing n jobs through k machines – processing 2 jobs through k machines.
